ESPAÑOL ORIGINAL: INGLÉS

COMITÉ EJECUTIVO DEL FONDO MULTILATERAL PARA LA APLICACIÓN DEL PROTOCOLO DE MONTREAL Nonagésima tercera reunión Montreal, 15-19 de diciembre de 2023 Cuestión 9 c) del orden del día provisional¹

ENMIENDAS AL PROGRAMA DE TRABAJO DEL PNUMA PARA EL AÑO 2023

¹ UNEP/OzL.Pro/ExCom/93/1.

Los documentos previos al período de sesiones del Comité Ejecutivo del Fondo Multilateral para la Aplicación del Protocolo de Montreal no van en perjuicio de las decisiones que el Comité pudiera adoptar después de la emisión de los mismos.

OBSERVACIONES Y RECOMENDACIONES DE LA SECRETARÍA

1. El PNUMA solicita al Comité Ejecutivo aprobar la suma de 5.618.157 \$EUA, más gastos de apoyo de 186.030 \$EUA, para las enmiendas al programa de trabajo para el año 2023 que se indican en el Cuadro 1. Se adjunta al presente documento la comunicación presentada por el PNUMA.

ACTIVIDADES RECOMENDADAS PARA APROBACIÓN GENERAL

A1: Renovación de proyectos de fortalecimiento institucional (FI)

Descripción

2. El PNUMA presentó sendas solicitudes de financiamiento para la renovación de los proyectos de fortalecimiento institucional de los países que se indica en la sección A1 del Cuadro 1. Los proyectos se detallan en el Anexo I al presente documento.

² En adelante, catastro nacional de bancos de sustancias controladas agotadas o de desecho y plan respectivo.

Observaciones de la Secretaría

3. La Secretaría analizó las solicitudes de renovación de 19 proyectos de fortalecimiento institucional presentadas por el PNUMA a nombre de los respectivos Gobiernos a la luz de las pautas³ y decisiones relativas a admisibilidad y niveles de financiamiento. Las solicitudes se confrontaron con los planes de trabajo de la fase anterior, con los datos del programa país y del artículo 7, con el último informe de ejecución del PGEH, con el informe de avance presentado por el organismo de ejecución y con las correspondientes resoluciones de la Reunión de las Partes. Se constató que todos los países han presentado los datos de sus programas país para el año 2022, que han dado cumplimiento a las metas de control previstas en el Protocolo de Montreal y que su consumo anual de HCFC no excede el máximo permitido en el Acuerdo con el Comité Ejecutivo. Según lo exige la decisión 91/63 b), las solicitudes evaluaban los indicadores de desempeño, los riesgos y sustentabilidad del proyecto y el logro de los objetivos de fortalecimiento institucional.

Recomendación

4. La Secretaría recomienda la aprobación general de las solicitudes de renovación de proyectos de fortalecimiento institucional para Antigua y Barbuda, Benin, el Estado Plurinacional de Bolivia, Burkina Faso, Islas Cook, Dominica, Gabón, Guyana, Iraq, Madagascar, Mauricio, los Estados Federados de Micronesia, Paraguay, Santa Lucía, Islas Salomón, Somalia, Timor-Leste, Togo y Yemen, al nivel de financiamiento que se indica en la sección A1 del Cuadro 1. El Comité Ejecutivo podrá estimar oportuno remitir a los respectivos Gobiernos las observaciones contenidas en el Anexo II al presente documento.

A2: Preparación de proyectos relativos a planes de gestión para la eliminación de HCFC (PGEH)

Descripción

5. El PNUMA, en calidad de principal organismo de ejecución, presentó la solicitud para la preparación de la etapa II del PGEH de Sudán del Sur que se indica en la sección A2 del Cuadro 1. En calidad de organismo cooperante, el PNUD solicita 10.000 \$EUA más gastos de apoyo de 700 \$EUA en las enmiendas a su programa de trabajo para el año 2023.⁴

6. El PNUMA adjunta la descripción de las actividades que respaldan la solicitud, entre ellas la justificación del financiamiento solicitado, un informe sobre los avances logrados durante la etapa I, el listado de las actividades que se llevarán a cabo y los correspondientes presupuestos, utilizando los formularios dispuestos a tal efecto.

Observaciones de la Secretaría

7. La Secretaría analizó la solicitud a la luz de las pautas de financiamiento contenidas en la decisión 71/42; de los avances logrados durante la etapa I, incluyendo el estado de ejecución de los tramos a la fecha del presente documento y de lo contemplado en la decisión 84/46 e).⁵ La Secretaría constató que los recursos solicitados se ajustan a lo dispuesto en la decisión 71/42, que durante

³ Decisión 91/63: b) Aprobar el formato revisado para informes finales y solicitudes de prórroga del financiamiento para fortalecimiento institucional y los respectivos indicadores de desempeño, y c) Solicitar a los países del Artículo 5, por intermedio de los organismos bilaterales y de ejecución, utilizar el formato revisado a que se refiere el subpárrafo b) anterior para toda solicitud de Renovación de proyectos de fortalecimiento institucional (FI) a partir de la primera reunión del Comité Ejecutivo en 2023.

⁴ UNEP/OzL.Pro/ExCom/93/35.

⁵ La inclusión en el plan administrativo de la etapa III de los PGEH se permite únicamente en el caso de países con una etapa II aprobada que contemple metas de reducción por debajo de las fijadas para el año 2025.

la 91^a reunión⁶ se prorrogó la fecha de término de la etapa I del PGEH para Sudán del Sur al 31 de diciembre de 2025 y que la solicitud concuerda con lo previsto en la decisión 82/45, según la cual las solicitudes para la etapa II podrán presentarse hasta dos años antes del término de la etapa I.

8. La Secretaría hizo notar que el consumo anual de HCFC informado para el año 2022, ascendiente a 1.24 toneladas PAO, supera el máximo de 1.07 toneladas PAO permitido en el Acuerdo actualizado con el Comité Ejecutivo para dicho año. El PNUMA aclaró que la oficina nacional del ozono había revisado los datos informados, constatando que un importador había sido considerado dos veces y que el dato correcto es de 1.02 toneladas PAO, cifra que se encuentra dentro del consumo máximo permitido. El Gobierno de Sudán del Sur solicitó formalmente corregir los datos del artículo 7 a fin de integrar el real consumo de HCFC durante el año 2022.

9. El PNUMA confirmó que la etapa II del PGEH para Sudán del Sur permitirá eliminar el 100 por ciento de la base de comparación de uso de HCFC al 1º de enero de 2030.

Recomendación

10. La Secretaría recomienda la aprobación general de los fondos solicitados para la preparación de los proyectos de la etapa II del PGEH de Sudán del Sur, al nivel de financiamiento que se indica en la sección A2 del Cuadro 1.

A3: Preparación de proyectos relativos a planes de aplicación de la Enmienda de Kigali

Descripción

11. El PNUMA solicitó fondos para preparar la etapa I del plan de aplicación de la Enmienda de Kigali en seis países del Artículo 5: en dos en calidad de organismo de ejecución designado, en tres en calidad de principal organismo de ejecución con la ONUDI como cooperante en Eritrea y San Vicente y las Granadinas y el PNUD como cooperante en Malí; y en uno como organismo de ejecución cooperante, con el Gobierno de Alemania como principal organismo de ejecución. Estas solicitudes constan en la sección A3 del Cuadro 1.

12. En las enmiendas a sus respectivos programas de trabajo para el año 2023, la ONUDI, en calidad de organismo de ejecución cooperante en Eritrea y San Vicente y las Granadinas, solicita 69.000 \$EUA más gastos de apoyo de 4.830 \$EUA,⁷ en tanto que el PNUD, en calidad de organismo de ejecución cooperante en Malí, solicita 35.000 \$EUA más gastos de apoyo de 2.450 \$EUA.⁸ El Gobierno de Alemania, en calidad de principal organismo de ejecución en Kenya, solicita 95.000 \$EUA más gastos de apoyo de 12.350 \$EUA, adjuntando una descripción de las actividades que demandará la preparación del plan de aplicación de la Enmienda de Kigali en Kenya e indicando en el documento sobre cooperación bilateral⁹ los costos de cada actividad y las observaciones de la Secretaría al respecto.

Observaciones de la Secretaría

13. La Secretaría analizó las solicitudes a la luz de las pautas de financiamiento para la preparación de planes de aplicación de la Enmienda de Kigali contenidas en la decisión 87/50, de las actividades propuestas para la preparación de proyectos y de su nexo con las actividades de apoyo y demás proyectos relativos a los HFC en los países en cuestión.

⁶ Anexo XVII al documento UNEP/OzL.Pro/ExCom/91/72.

⁷ UNEP/OzL.Pro/ExCom/93/37.

⁸ UNEP/OzL.Pro/ExCom/93/35.

⁹ UNEP/OzL.Pro/ExCom/93/32.

14. El PNUMA, en calidad de principal organismo de ejecución designado, describió en los formularios dispuestos a tal efecto las actividades que demandará la preparación de las estrategias transversales para los planes de aplicación de la Enmienda de Kigali en Eritrea, Georgia, Malí, República de Moldova y San Vicente y las Granadinas, adjuntando para cada país los datos de consumo de HFC y sus mezclas. Entre las actividades de preparación de proyectos contempladas se cuentan un estudio y recopilación de datos de consumo de HFC por país; un análisis del uso de HFC y sus alternativas; reuniones consultivas y de validación de datos con las contrapartes; una recopilación de datos y análisis de las capacidades del sector servicio técnico de refrigeración y climatización y el desarrollo de una estrategia transversal de reducción de los HFC. Además de lo indicado, en algunos países se agregaron actividades de análisis de las necesidades y capacidades de las estructuras de aduanas, comercio y fiscalización; desarrollo de planes de acción para integrar la perspectiva de género; estudios sobre el marco legislativo y de políticas sectoriales; una evaluación de la capacidad de recuperación, reciclaje y destrucción; elaboración de políticas y normas de regulación de los HFC, incluyendo un sistema de cuotas, y la promoción de alternativas de bajo PCA a través de un análisis de incentivos y desincentivos.

15. La Secretaría constató que los cinco países donde el PNUMA es el principal organismo de ejecución designado han ratificado la Enmienda de Kigali,¹⁰ que todos han manifestado por escrito su intención de adoptar prontamente medidas tendientes a la reducción de los HFC y que el financiamiento solicitado se ajusta a la decisión 87/50 c). El PNUMA aclaró que la preparación de las estrategias transversales para los planes de aplicación de la Enmienda de Kigali de cada país se sustentará en las actividades de apoyo previamente realizadas, las que sirvieron de punta de lanza para la reducción de los HFC y contribuyeron a la ratificación de la Enmienda de Kigali.

Recomendación

16. La Secretaría recomienda la aprobación general de los fondos solicitados para la preparación de los proyectos de la etapa I de los planes de aplicación de la Enmienda de Kigali en Eritrea, Georgia, Kenya, Malí, República de Moldova y San Vicente y las Granadinas a los niveles de financiamiento que se indica en la sección A3 del Cuadro 1.

A4: Preparación de un catastro nacional de bancos de sustancias controladas agotadas o de desechos y de un plan para su acopio, transporte y eliminación

Descripción

17. El PNUMA solicita financiamiento para la preparación de un catastro nacional de bancos de sustancias controladas agotadas o de desecho y del plan respectivo en calidad de organismo de ejecución designado en siete países y de organismo cooperante en otros cuatro donde la ONUDI es el principal organismo de ejecución, según se indica en la sección A4 del Cuadro 1.

18. La ONUDI, en calidad de principal organismo de ejecución en el Estado Plurinacional de Bolivia, Guatemala, Honduras y Nicaragua, solicita la suma de 220.000 \$EUA más gastos de apoyo de 15.400 \$EUA en las enmiendas a su programa de trabajo para el año 2023.¹¹

Observaciones de la Secretaría

19. La Secretaría analizó las solicitudes a la luz de las pautas para financiar la preparación de catastros nacionales de bancos de sustancias controladas agotadas o de desecho y de los planes respectivos contenidas en la decisión 91/66 y de las actividades propuestas para la preparación de

 ¹⁰ Fecha de ratificación (o aceptación) de la Enmienda de Kigali: Eritrea (7 febrero 2023), Georgia (11 julio 2023), Malí (22 septiembre 2023), Moldova (22 septiembre 2023) y San Vicente y las Granadinas (7 noviembre 2023).
 ¹¹ Ibid.

proyectos y de su nexo con los planes nacionales de eliminación o reducción (PGEH o plan de aplicación de Kigali). La Secretaría comprobó además que las solicitudes se ajustan a lo dispuesto en la decisión 91/66

20. El PNUMA, en calidad de organismo de ejecución designado, describió en los formularios dispuestos a tal efecto las actividades que demandará la preparación de un catastro nacional de sustancias controladas agotadas o de desecho y del plan respectivo en Albania, Armenia, Costa Rica, República Dominicana, El Salvador, República de Moldova y Yemen.

21. Entre las actividades descritas en las solicitudes de financiamiento para estos siete países se destacan la preparación del catastro nacional, plan de acción e informe final; una evaluación regulatoria orientada a determinar las necesidades de control de SAO y bancos de HFC de desecho; consultas con las partes intervinientes; una recopilación de datos y análisis del volumen de refrigerantes agotados o de desecho de los tipos determinados y de las fuentes de equipos y su verificación; la determinación de un modelo sustentable de costos y financiamiento para la ejecución; la identificación de laboratorios capaces de analizar la composición de SAO y HFC agotados o de desecho y su posible modernización, y consideraciones sobre la integración de la perspectiva de género. En algunos países, las actividades de preparación incluirán talleres regionales de intercambio de experiencias con otros países centroamericanos y la realización de pruebas de destrucción en hornos de cemento a fin de verificar que el coprocesamiento cumpla con las normas de emisión.

Recomendación

22. La Secretaría recomienda la aprobación general, al nivel de financiamiento que se indica en la sección A4 del Cuadro 1, de la preparación de un catastro nacional de bancos de sustancias controladas agotadas o de desechos y de planes para su acopio, transporte y eliminación en Albania, Armenia, Estado Plurinacional de Bolivia, Costa Rica, República Dominicana, El Salvador, Guatemala, Honduras, Nicaragua, República de Moldova y Yemen.

	Total:	626,740
(d)	HFC activities funded from additional voluntary contributions	0

Progress report

2. Phase V of the institutional strengthening (IS) project for Antigua and Barbuda supported the country's efforts to maintain the implementation of Montreal Protocol activities. Phase V experienced delays in implementation owing to the COVID-19 global pandemic and administrative challenges within the national ozone unit (NOU) and Government. However, during UNEP's May 2023 mission, the country recommitted to the implementation of Montreal Protocol projects including IS. The NOU monitored the implementation of the licensing and quota system, monitored its borders to guard against illegal ODS trade, and collected, verified and submitted its country programme and Article 7 data, allowing Antigua and Barbuda to maintain compliance under the Montreal Protocol. During phase V, the country fully achieved the IS indicators apart from those that were rated as "not applicable" as there was no active HCFC phaseout management plan (HPMP) being implemented during the period.

Plan of action

3. Under phase VI, the Government of Antigua and Barbuda will continue to support activities to phase out HCFCs and promote related issues. Ratification of the Kigali Amendment is anticipated to be achieved. The newly created Independent Oversight Advisory Committee (following UNEP's mission) is expected to play a greater role in guiding and supporting the NOU with implementation of activities. As a result of the global COVID-19 pandemic, the NOU will increase the use of virtual tools to diversify its outreach and visibility. The following actions will be undertaken during the new phase: continue to strengthen coordination within the NOU and with relevant stakeholders; implement the licensing and quota system for HCFCs and the licensing system for HFCs and share more information regarding the Kigali Amendment; coordinate and monitor programme activities under the HPMP; work closely with stakeholders in the refrigeration servicing sector; implement public awareness campaigns through virtual and print media. During the next phase, the NOU will maintain its timely country programme and Article 7 data reporting and will participate in meetings related to the Montreal Protocol. Additionally, the Government will promote participation of women in the refrigeration servicing sector.

Sustainability and risk assessment

4. The NOU is located within the Ministry of Foreign Affairs, Agriculture, Trade and Barbuda Affairs and is under the direct supervision of the Office of the Permanent Secretary. The work programme of the NOU is incorporated within that of the Ministry. With the installation of the Independent Oversight Advisory Committee with the Permanent Secretary as the Chair, this confirms the importance of this committee and its role in ensuring support to the NOU. These factors contribute to the sustainability of the IS and the framework to assess risks ahead of time and plan for suitable interventions in advance. Additionally, UNEP requires interim reports as part of the Small-scale Funding Agreement (SSFA) with the country. These reports contain a section where the country is required to identify in advance, any issues that it is experiencing or where the activities are not proceeding as planned, so that UNEP as implementing agency may support, assess and intervene where necessary.

(a)	Investment projects:	770,609
(b)	Institutional strengthening:	737,335
(c)	Project preparation, technical assistance, training and other non-investment projects:	1,722,880

Summ	ary of activities	Funds approved (US \$)
	Total:	3,230,824
(d)	HFC activities funded from additional voluntary contributions	150,000

Progress report

6. Under phase XII of its IS project, Benin's NOU achieved all seven performance objectives. The NOU collected ODS and HFC import data and submitted country programme and Article 7 data to the Fund and Ozone Secretariats, respectively; held annual meetings with stakeholders, including the National Ozone Committee, for effective coordination; and supervised training for 106 refrigeration and air-conditioning (RAC) technicians and 34 customs officers. The NOU implemented continuing activities including raising awareness about HCFC alternatives, relevant laws and regulations; and actively observed World Ozone Day and engaged in Montreal Protocol-related meetings.

Plan of action

7. During phase XIII of the IS project, the NOU will focus on: continuing information dissemination and awareness activities; coordinating the implementation of stage II of the HPMP; promoting and enforcing the licensing and quota system, providing importers with annual quota information; establishing the technician certification program; sustaining monitoring and evaluation efforts; conducting annual stakeholder workshops to promote low-GWP HCFC alternatives; timely data collection and reporting to the Ozone and Fund Secretariats, and preparation of the overarching strategy for the Kigali HFC implementation plan (KIP).

Sustainability and risk assessment

8. The Government of Benin is actively regulating HCFC and HFC consumption in line with the Montreal Protocol targets. Training centres have been equipped for technicians, and customs officers are being trained to monitor HCFC and HFC imports and potential illegal trade. These actions are expected to mitigate risks of project implementation experienced in the past. UNEP as implementing agency continues to support Benin in timely project implementation. Despite all challenges, online meetings and training have been effective.

	Total:	3,928,893
(d)	HFC activities funded from additional voluntary contributions	150,000

Progress report

10. The implementation of Montreal Protocol activities in Bolivia (Plurinational State of) continued with significant progress under phase XI of the IS project. The NOU worked to achieve broad consensus on revised national ODS legislation. An operational ODS import/export licensing and HCFC quota system is in place and the licensing system includes HFC substances. Article 7 and country programme data were submitted to the Ozone and Fund Secretariats, respectively, accurately and in a timely manner. The enabling activities for HFC phase-down project was completed in June 2022. NOU staff also coordinated activities for the final tranches of stage I of the HPMP, and the first tranche of stage II. Several training sessions for customs officers were organized. The country has encouraged the continued participation of stakeholders in the implementation of the Montreal Protocol at the national level, and organized awareness-raising activities as well as World Ozone Day celebrations and participated in regional network meetings and events.

Plan of action

11. Bolivia will continue implementing HCFC phase-out and submit its Kigali HFC implementation plan in an effective manner to meet the HCFC phase-out and HFC phase-down targets, while ensuring gender mainstreaming in implementation of those projects. In addition, it will continue strengthening the controlled substances legislation to fulfill the requirements of the stage II of the HPMP and the Kigali Amendment, and the development of national capacities to allow the efficient implementation of all its provisions. The action plan also includes strict monitoring and control of the imports and use of HCFCs

and HFCs, as well as facilitating access to and use of new alternative substances and technologies. The NOU will continue public awareness-raising activities especially with the education sector and with a gender focus during the celebration of World Refrigeration Day and World Ozone Day as well as national events.

Sustainability and risk assessment

12. The frequent changes in Government, and in national entities, have threatened compliance with the commitments made under the Montreal Protocol and the sustainability of the project. Therefore, the NOU has been working to ensure the continuity of the actions included in the HPMP implementation plan and to raise awareness of the new authorities on the importance of the project for the country's compliance with the Montreal Protocol and for the ozone layer protection. One of the positive results achieved is the strengthening of the regulatory framework for the control of substances controlled by the Montreal Protocol and the products/equipment that depend on them, guaranteeing the sustainability of the achievements achieved so far. In addition, to ensure the long-term sustainability of the HCFC phase-out and mitigate the risks to project implementation, the NOU maintains good communication with and has support from the Customs Agency to ensure control of HCFC substances.

(c) Project preparation, technical assistance, training and other non-investment projects:	1,896,296
Total:	3,552,379
(d) HFC activities funded from additional voluntary contributions	150,000

Progress report

14. Burkina Faso's NOU implemented phase XIV of the IS project, achieving six out of seven performance objectives. The NOU collected ODS and HFC import data and submitted country programme and Article 7 data to the Fund and Ozone Secretariats, respectively. Annual meetings with stakeholders, including the National Ozone Committee, were held for effective coordination. The NOU oversaw training for 116 RAC technicians and 106 customs officers. Ongoing activities included raising awareness about HCFC alternatives, relevant laws and regulations. Burkina Faso actively observed World Ozone Day and engaged in Montreal Protocol-related meetings.

Plan of action

15. In Phase XV of the IS project, the NOU will focus on: continuing information dissemination and awareness activities; coordinating the implementation of stage II of the HPMP; promoting and enforcing the licensing and quota system, providing importers with annual quota information; establishing the technician certification programme; sustaining monitoring and evaluation efforts; conducting annual stakeholder workshops to promote low-GWP HCFC alternatives; timely data collection and reporting to the Ozone and Fund Secretariats; and preparation of the overarching strategy for the KIP.

Sustainability and risk assessment

16. The IS project can be successfully implemented in Burkina Faso under conditions of stable funding. Stakeholders, relevant associations, ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Steering Committee which comprises of key line Ministries, the RAC sector and other relevant agencies.

(a)	Investment projects:	0
(b)	Institutional strengthening:	502,500
(c)	Project preparation, technical assistance, training and other non-investment projects:	377,501
	Total:	880,001
(d)	HFC activities funded from additional voluntary contributions	50,000

Progress report

18. Phase VIII of the IS project demonstrated the high level of national organization that the Government has achieved through the NOU. The Government implemented recommendations from the verification of HCFC consumption to further strengthen HFC trade control and sustain compliance with the Montreal Protocol HCFC phase-out obligations and maximum allowable consumption as agreed. The country fulfilled its data reporting obligations to the Ozone and Fund Secretariats in a timely manner and has sustained compliance with the HCFC reduction targets. The national ozone officer worked in close collaboration with the Customs Department, Cook Islands Refrigeration and Air-Conditioning (CIRAC) Association and other stakeholders in expediting implementation and sustain compliance with the Montreal Protocol. All the planned activities included in phase VIII made progress and fulfilled the objectives.

Plan of action

19. Phase IX will include: implementing the HFC licensing and quota system; adoption of the Pacific Harmonized Commodity Description and Coding System 2022 (PACHS22) to have individual HS code for HFCs and blends; timely submission of Article 7 and country programme data; active engagement of key stakeholders and RAC association in the implementation of Montreal Protocol projects; coordination with stakeholders for the implementation of the HPMP and preparation of the KIP; organization of the World Ozone Day celebration and development of awareness materials; and participation in regional and international meetings. Gender mainstreaming will be integrated into implementation of the project activities.

Sustainability and risk assessment

20. The IS project can be successfully implemented in the Cook Islands under conditions of stable funding. Stakeholders, relevant associations, ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Committee which is comprised of key inline Ministries, the RAC sector and other relevant agencies. Since the Cook Islands has yet to adopt and put the WCO HS 2022 into effect, there are risks that HFC imports will not be accurately identified and recorded in the customs system. There might be some challenges with customs declarations due to the different types of HFCs as opposed to one type of HCFC; this is being discussed between the NOU and Customs. Therefore, it is crucial that the NOU strengthens cooperation with the Customs Department in monitoring HFCs through targeted awareness-raising for importers and customs brokers on identifying HFCs being imported with their proper HS codes.

Total:	982,386
(d) HFC activities funded from additional voluntary contributions	50,000

Progress report

22. Phase VII of the IS project in Dominica was key in supporting the country's efforts to maintain the implementation of the Montreal Protocol activities. The phase experienced delays in its implementation due to lingering effects of Hurricane Maria compounded by the COVID-19 global pandemic and administrative changes within the NOU and Government. However, during UNEP's mission in June 2023, technical and policy experts from relevant government ministries were engaged and demonstrated their commitment to the implementation of the Montreal Protocol. The following was implemented: ODS legislation and regulation to control and monitor ODS consumption and measures towards controlling HFCs; data collection, analysis, and submission; consultations and coordination with other national agencies/stakeholders; coordination of HPMP implementation activities; awareness-raising and information exchange; and regional cooperation and participation in Montreal Protocol meetings. Currently, the country is continuing to work towards achieving favourable ratings of the indicators except where rated "not applicable" as the country worked only to a limited extent on the integration of the Multilateral Fund gender mainstreaming policies.

Plan of action

23. Under phase VIII, the Government will continue to support activities to phase out HCFCs and promote Montreal Protocol activities. Through continued key stakeholder engagement, ratification of the Kigali Amendment is anticipated to be achieved. The NOU and line ministry are planning the organization of a steering committee comprised of the Permanent Secretary, senior technical advisor, and senior policy advisor to support the NOU with the implementation of activities. As a result of the COVID-19 pandemic, the NOU will increase the use of virtual tools to broaden its outreach and visibility. During the new phase, the NOU will continue: to strengthen coordination with stakeholders; to implement the licensing and quota system for HCFCs and begin the implementation of a licensing system for HFCs; to coordinate and monitor programme activities under the HPMP; to work closely with stakeholders in the refrigeration servicing sector including capacity development; and to implement public awareness campaigns through virtual and print media. The NOU will also maintain its timely country programme and Article 7 data reporting to the Fund and Ozone Secretariats, respectively, participate in Montreal Protocol-related meetings and promote women's participation in the refrigeration servicing sector.

Sustainability and risk assessment

24. The NOU is located within the Ministry of Environment, Rural Modernisation, Kalinago Upliftment, and Constituency Empowerment under the direct supervision of the Office of the Permanent Secretary. The work programme of the NOU is incorporated within this Ministry. The planned organization of a National Ozone Steering Committee with the Permanent Secretary as a member, confirms the importance of this committee and its intended role in providing direct support to the NOU. These factors contribute to the sustainability of the IS project and the framework to assess risks ahead of time and plan for suitable interventions in advance. Additionally, UNEP requires interim reports as part of the SSFA with the country. These reports allow the country to identify in advance, any issues that it is experiencing or where the activities are not progressing as planned, providing an early indication where UNEP as implementing agency may support, assess and intervene where necessary.

Gabon: Renewal of institutional strengthening

Sun	nmary of activities	Funds approved (US \$)
(a)	Investment projects:	333,142
(b)	Institutional strengthening:	670,223
(c)	Project preparation, technical assistance, training and other non-investment projects:	1,525,706
	Total:	2,529,071
(d)	HFC activities funded from additional voluntary contributions	150,000

Progress report

26. During phase XI of the IS project in Gabon, the NOU collected ODS and HFC import data and submitted country programme and Article 7 data to the Fund and Ozone Secretariats, respectively. Annual meetings with stakeholders, including the National Ozone Committee, were held for effective coordination. The NOU oversaw training for 17 customs officers; raised awareness about HCFC alternatives, relevant laws and regulations; organized World Ozone Day celebrations and engaged in Montreal Protocol-related meetings. Gabon achieved five out of seven IS performance objectives with two indicators partially achieved.

Plan of action

27. During phase XII of the IS project, the NOU will focus on: continuing information dissemination and awareness activities; coordinating the implementation of stage II of the HPMP; promoting and enforcing the licensing and quota system, providing importers with annual quota information; establishing the technician certification programme; sustaining monitoring and evaluation efforts; conducting annual stakeholder workshops to promote low-GWP HCFC alternatives; timely data collection and reporting to the Ozone and Fund Secretariats; and preparation of the overarching strategy for the KIP for Gabon.

Sustainability and risk assessment

28. The Government is actively regulating HCFC and HFC consumption in line with the Montreal Protocol targets. Training centres have been equipped for technicians, and customs officers are being trained to monitor HCFC and HFC imports and potential illegal trade of those substances. These actions are expected to mitigate the risks of project implementation experienced in the past. UNEP as implementing agency continues to support Gabon in timely project implementation. Despite the challenges, online meetings and training have been effective.

ODS phased out (as at December 2022) (ODP tonnes):	60.6

Summary of activities	Funds approved (US \$)
(a) Investment projects:	514,733
(b) Institutional strengthening:	1,075,022
(c) Project preparation, technical assistance, training and other non-investment projects:	876,063
Total:	2,465,818
(d) HFC activities funded from additional voluntary contributions	95,000

Progress report

30. Phase VIII of the IS project for Guyana was instrumental in aiding the country's efforts to maintain the implementation of Montreal Protocol activities. During the phase, the project experienced delays in implementation owing to the lingering effects of the COVID-19 pandemic and administrative challenges within the NOU and Government. However, with the support of UNEP, the NOU continued to engage with technical and political intergovernmental focal points towards the implementation of ODS legislation and regulation to control and monitor ODS consumption and took measures towards controlling HFCs; data collection, analysis, and submission; consultations and coordination with other national agencies/stakeholders; coordination of HPMP implementation activities as scheduled; awareness-raising and information exchange; and regional cooperation and participation in Montreal Protocol meetings. Of the seven IS indicators, three were fully achieved, three partially achieved and one was not achieved.

Plan of action

31. As part of phase IX, the Government will continue to support activities to phase out HCFCs and promote related issues. Through continued public and key stakeholder engagement, ratification of the Kigali Amendment is anticipated to be achieved by April 2024. Although a steering committee to support the NOU is not operational, the Minister of Agriculture, as a member of the Cabinet and Parliament, represents the interests of the National Ozone Action Unit at the various policy levels to support the NOU with the implementation of activities. As one of the lessons learned during the COVID19 pandemic, the

UNEP/OzL.Pro/ExCom/93/36 Annex I

NOU will continue the use of various virtual tools to broaden its outreach and visibility including radio and television. The following actions will be undertaken during the new phase: continue to strengthen coordination works of the NOU; continue to implement the licensing and quota system for HCFCs and begin the implementation of a licensing and quota system for HFCs; continue to coordinate and monitor programme activities under the HPMP; work closely with stakeholders in the refrigeration servicing sector including training and capacity development; and implement public awareness campaigns through virtual and print media. During the next phase, the NOU will continue to maintain its timely reporting of country programme and Article 7 data to the Fund and Ozone Secretariats, respectively, and will maintain active participation in the meetings related to the Montreal Protocol and the promotion of women's participation in the refrigeration servicing sector.

Sustainability and risk assessment

32. The NOU functions under the Ministry of Agriculture through the Hydrometeorological Service under the direct supervision of the Chief Hydrometeorological Office with oversight from the office of the Permanent Secretary. The work programme of the NOU is incorporated within this department and Ministry and is also provided with in-kind support from the Government of Guyana. This integration contributes to the sustainability of the IS project and the framework to assess risks ahead of time and plan for suitable interventions in advance. Additionally, the country provides interim progress reports to the implementing agency as part of the SSFA with the country. These reports allow the country to identify in advance, any issues that is it experiencing or where the activities are not progressing as planned, providing an early indication where UNEP may support, assess, and intervene where necessary.

Iraq: Renewal of institutional strengthening

Summary of the project and country profile	
Implementing agency:	UNEP
ODS phased out (as at December 2022) (ODP tonnes):	1,481.6

Summary of activities	Funds approved (US \$)
(a) Investment projects:	7,611,820
(b) Institutional strengthening:	1,453,041
(c) Project preparation, technical assistance, training and other non-investment projects:	2,506,805
Total:	11,571,667
(d) HFC activities funded from additional voluntary contributions	0

Progress report

34. During the implementation of phase V of the IS project, Iraq effectively implemented ODS control measures and the HCFC licensing and quota system; submitted timely country programme and Article 7 data to the relevant Secretariats; participated in regional networks other Montreal Protocol-related meetings.; and conducted extensive public awareness and information dissemination activities to facilitate full access of users and stakeholders to information on ozone layer protection and related non-ODS technologies, to enable a smooth implementation of the phase-out programme. Iraq has successfully implemented phase V and has fully achieved four and partially achieved three of the IS performance objectives.

Plan of action

35. During phase VI, the Ozone Unit will continue to work with all stakeholders and update them on recent developments under the Montreal Protocol and ensure their full engagement in implementing the ongoing HPMP and other Multilateral Fund-supported activities. The Ozone Unit will continue the effective operation of the HCFC quota and licensing system to ensure full compliance with the agreed HCFC reduction steps, will enforce the updated system that includes HFCs as required under the Kigali Amendment, facilitate the ratification process of the Kigali Amendment and pursue efforts to identify feasible alternatives suitable for high ambient temperature countries with emphasis on the non-in-kind technologies. The Ozone Unit will also intensify its efforts to ensure the proper implementation of remaining activities under stage I of the HPMP to achieve the upcoming phase-out targets; and will continue raising public and industry awareness and preparing Montreal Protocol reports.

Sustainability and risk assessment

36. The main risk would be the delayed ratification of the Kigali Amendment and adoption of feasible alternatives for the high ambient temperature conditions. UNEP Compliance Assistance Programme will continue to provide all required support to facilitate the process for the ratification of the Kigali Amendment and thus support the country to prepare and adopt all required policies, regulations, and standards to facilitate full compliance. Support will also continue to ensure timely implementation of the ongoing HPMP and facilitate the approval of the second tranche under stage II to achieve the planned phase-out targets and lay the groundwork for introducing new alternatives.

Progress report

38. Madagascar's NOU successfully implemented phase IX of the IS project, fully achieving two and partially achieving five out of seven performance objectives. The NOU collected ODS import data and submitted country programme and Article 7 data to the Fund and Ozone Secretariats, respectively; held annual meetings with stakeholders, including the National Ozone Committee, for effective coordination; established a national legislative and regulatory framework to prepare for the ratification of the Kigali Amendment; oversaw training for 180 RAC technicians and 41 customs officers and 11 Environmental Judicial Police Officers; raised awareness about HCFC alternatives, relevant laws and regulations; and actively observed World Ozone Day and engaged in regional network and thematic meetings.

Plan of action

39. In phase X of the IS project, the NOU will focus on: continuing information dissemination and awareness activities; coordinating the implementation of stage II of the HPMP; promoting and enforcing the licensing and quota system, providing importers with annual quota information; establishing the technician certification programme; sustaining monitoring and evaluation efforts; conducting annual stakeholder workshops to promote low-GWP HCFC alternatives; timely data collection and reporting to the Ozone and Fund Secretariats; national-level communication regarding the country's ratification of the Kigali Amendment; and establishing the HFC licensing and quota systems.

Sustainability and risk assessment

40. The Government is actively regulating HCFC in line with Montreal Protocol targets. Training centres have been equipped for technicians, and customs officers are being trained to monitor HCFC and HFC imports and potential illegal trade of these substances. These actions are expected to mitigate risks of project implementation experienced in the past. UNEP as implementing agency continues to support Madagascar in timely project implementation. Despite all challenges, online meetings and training have been effective. The government plans to ban certain HCFC and HFC imports, contributing to a sustainable phase-out.

Mauritius: Renewal of institutional strengthening

Sumr	nary of activities	Funds approved (US \$)
(a)	Investment projects:	1,511,851
(b)	Institutional strengthening:	471,504
(c)	Project preparation, technical assistance, training and other non-investment projects:	849,421
	Total:	2,832,776
(d)	HFC activities funded from additional voluntary contributions	0

Progress report

42. During phase VII of the IS project for Mauritius, the NOU in consultation with relevant stakeholders ensured that implementation of the HPMP was effectively and properly done. The NOU also coordinated training for RAC technicians and customs officers and reported Article 7 and country programme data to the Ozone and Fund Secretariats, respectively, in a timely manner. The Environment Protection Act was in the process of being amended during the phase to make provisions for regulation specific to the introduction of a quota system for HFCs, which took longer than expected. Mauritius fully achieved five of the seven IS indicators, and partially achieved two.

Plan of action

43. The NOU under the supervision of the Department of Environment, and in collaboration with stakeholders and partners, will continue the coordination and implementation of the IS project and the HPMP, as well as initiate HFC phase-down activities under the Kigali Amendment. The country will develop and implement its KIP to ensure sustained compliance with Montreal Protocol reduction targets, including consideration of gender issues, following the Multilateral Fund gender policy. Further, the NOU, in collaboration with the Mauritius Institute of Training and Development, will continue implementing training programmes for the RAC technicians; training of newly-recruited customs officers, and other enforcement agencies to support the implementation and enforcement of regulations including control measures of HCFCs and HFCs; and dialogue with regional network members and participate in the regional network and Montreal Protocol meetings. The NOU will continue its awareness-raising programme through mass media, NGOs, workshops, and distribution of awareness materials such as flyers, brochures, pamphlets and others to the industry and other stakeholders.

Sustainability and risk assessment

44. The Ministry of Environment, Solid Waste Management, and Climate Change provides in-kind contribution to all projects and activities implemented under the Montreal Protocol, in terms of manpower and other logistics. The projects are also subjected to periodic internal and external audits to ensure adequate risk avoidance and management.

	Total:	942,986
(d)	HFC activities funded from additional voluntary contributions	50,000

Progress report

46. During phase VIII, the Federated States of Micronesia (FSM) demonstrated a high level of national organisation that the Government has achieved through the NOU and the IS project. The combined efforts of the NOU, Senior Management, College of Micronesia, and the four RAC associations all contributed to the sustained efforts in meeting the country's obligations to the Montreal Protocol and expediting the implementation of phase VIII. During the phase, the country fulfilled its data reporting obligations to the Ozone and Fund Secretariats in a timely manner and sustained compliance with the HCFC reduction targets. Compliance was sustained through a holistic approach comprised of legislative measures, HCFC/HFC licensing system, HCFC quota system, transitioning to an e-licensing system and monitoring of ODS import, capacity building, involvement of the National Ozone Committee and the RAC association as well as public sector awareness-raising activities. The Federated States of Micronesia successfully achieved all seven of the IS performance objectives.

Plan of action

47. Phase IX will include: implementation of the e-licensing system for HCFC and HFC; adoption of the Pacific Harmonized Commodity Description and Coding System 2022 (PACHS22) to have individual

UNEP/OzL.Pro/ExCom/93/36 Annex I

HS code for HFCs and blends; timely submission of Article 7 and country programme data; active engagement of the National Ozone Committee and RAC Association in the implementation of Montreal Protocol; coordination with stakeholders for the implementation of the HPMP; organisation of the World Ozone Day celebration and development of awareness materials; and participation in regional and international meetings. Gender mainstreaming will be integrated into implementation of the upcoming phase and other Multilateral Fund-supported projects in the country.

Sustainability and risk assessment

48. The IS project can be successfully implemented in FSM under conditions of stable funding. Stakeholders, relevant associations, and ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Committee which is comprised of key inline ministries, the RAC sector and other relevant agencies. Since FSM has yet to adopt and put the WCO HS 2022 into effect, there are risks that HFC imports will not be accurately identified and recorded in the Customs system. There will be some difficulties with inaccurate customs declarations due to the different types of HFCs as opposed to one type of HCFC that is currently under the NOU's and Customs' surveillance. Therefore, it is crucial that the NOU strengthens cooperation with Customs in monitoring HFCs through targeted awareness for importers and customs brokers on identifying HFCs being imported with their proper HS codes.

	Total:		4,104,893
(d)	HFC activities funded from additional voluntary contributions		150,000

Progress report

50. The implementation of Montreal Protocol activities in Paraguay continued with good progress under phase X of the IS project. The NOU worked to achieve broad consensus on revised national SDG legislation; an operational ODS import/export licensing and HCFC quota system is in place; legislation has been updated to comply with obligations under the Kigali Amendment and include HFC substances within the licensing system; and Article 7 and country programme data were submitted to the Ozone and Fund Secretariats, respectively, accurately and in a timely manner. The enabling activities project for HFC phase-down was completed in June 2022 and NOU staff coordinated activities under the final tranches of stage I of the HPMP as well as the first tranche of stage II. The labor competency standard has been validated for the management of flammable refrigerants and the NOU hosted the committee on good refrigeration practices. Companies were encouraged to adopt good refrigeration practices and an awareness raising campaign was implemented for the public. The country encouraged the continued participation of stakeholders in the implementation of the Montreal Protocol at the national level, and it organized the World Ozone Day celebrations, as well as participated in regional network events.

Plan of action

51. With the support of the IS project, the NOU will continue activities such as implementation of the HCFC/HFC license and quota system, the development of a work plan with customs to control illegal traffic by updating risk profiles, while ensuring gender mainstreaming and facilitating access to and use of new alternative substances and technologies in the country. The NOU will continue the coordination with customs to ensure an effective surveillance of international trade of all Montreal Protocol controlled substances, facilitating the involvement of main country stakeholders (importers, exporters, suppliers, technicians, and end-users) in the implementation of the HPMP and ultimately in the reduction of the national HCFC/HFC demand. The NOU will also continue with trainings of main actors, continue the participation via the committee on good refrigeration practices and support the implementation of the Kigali Amendment roadmap to comply with the phase-out and phase-down targets of Paraguay. Public awareness campaigns through social media, the RAC association and end-users will continue especially in cooperation with the education sector; and celebrations of World Refrigeration Day and World Ozone Day as well as during national events will include a focus on gender.

Sustainability and risk assessment

52. The NOU works together with Customs agency to ensure the sustainability of the activities to control the substances controlled by Montreal Protocol. The country has successfully trained refrigeration

UNEP/OzL.Pro/ExCom/93/36 Annex I

technicians on good refrigeration practices and safe handling of alternative substances, gained stakeholder support, and it is committed to the formulation of norms/standards for the safe handling of alternative refrigerants. In addition, it has carried out consultation meetings and raised public awareness on ozone layer protection. UNEP as implementing agency will continue to support Paraguay to implement the HPMP and IS project and as well as the KIP to meet the HCFC phase-out and HFC phase-down targets, ensuring gender mainstreaming in implementation of the projects, and seek the necessary means to guarantee sustainability and reducing risks.

Saint Lucia: Renewal of institutional strengthening

53. Summary of activities and funds approved by the Executive Committee:

Summary of activities	Funds approved
	(US \$)
(a) Investment projects:	409,225
(b) Institutional strengthening:	592,980
(c) Project preparation, technical assistance, training and other non-investment projects:	868,055
Total:	1,870,260
(d) HFC activities funded from additional voluntary contributions	95,000

Progress report

54. Under phase XI of the IS project for Saint Lucia, the country experienced some delays in its implementation owing to the lingering effects of the COVID-19 pandemic and administrative challenges within the NOU and Government. However, with the support of UNEP, the NOU engaged with technical and political intergovernmental focal points towards the implementation of the Montreal Protocol project portfolios resulting in implementation of activities and the achievement of the objectives. Saint Lucia maintained compliance with the Montreal Protocol and sustained the 35 per cent reduction in HCFCs met by 1 January 2020, as stipulated by the Montreal Protocol phase out schedule. The NOU continued implementation of ODS legislation and regulation to control and monitor ODS consumption and took measures towards controlling HFCs; data collection, analysis, and submission; consultations and coordination with national agencies/stakeholders; coordination of HPMP implementation activities as scheduled; awareness raising and information exchange; and regional cooperation and participation in Montreal Protocol meetings. During the phase, Saint Lucia fully achieved six of the seven IS performance objectives, and partially achieved one.

Plan of action

55. During phase XII, the Government will continue to support activities to phase out HCFCs and promote related issues. As one of the lessons learned during the COVID-19 pandemic, the NOU will continue to increase the use of various virtual tools to broaden its outreach and visibility including radio and television. The NOU also plans to strengthen its public education and awareness activities to ensure all stakeholders understand their roles in the HCFC phase-out and HFC phase-down processes. Additionally, climate protection and energy efficiency will continue to be considered when making decisions regarding alternative technologies. The NOU will continue to sensitize Saint Lucians about ozone layer linkages to climate change and energy efficiency and the importance of exploring alternatives that result in climate and energy benefits in line with and maintaining compliance with the Kigali Amendment. The following actions will be undertaken during the new phase: continue to strengthen coordination between the NOU and other national stakeholders; continue to implement the licensing and quota system for HCFCs and begin the implementation of a licensing system for HFCs; continue to coordinate and monitor programme activities under stage II of the HPMP and projects related to HFC phase-down; work closely with stakeholders in the refrigeration servicing sector, including on training and capacity development; and implement public awareness campaigns through virtual and print media. During the next phase, the NOU will maintain its timely country programme and Article 7 data reporting and will maintain active participation in the meetings related to the Montreal Protocol and the promotion of women's participation in the refrigeration servicing sector.

Sustainability and risk assessment

56. The NOU functions under the Sustainable Development and Environment Division of the Department of Sustainable Development with oversight from the office of the Permanent Secretary and is monitored quarterly by various monitoring arms of the Government including the Customs and Excise Department, the Import Monitoring Unit of the Department of Commerce and the National Air-conditioning and Refrigeration Association (NARA). The work programme of the NOU is incorporated within these departments, ministries and organizations and is bolstered with in-kind support from the Government of Saint Lucia. In addition, the NOU has established a Montreal Protocol Technical Working Group (MP-TWG) comprising the full range of stakeholders from the public and private sectors and non-governmental organisations involved in matters related to environmental protection in general, and ozone layer protection in particular. This multi-level integration contributes to the sustainability of the IS project and HPMP and the framework to assess risks ahead of time and plan for suitable interventions in advance. Additionally, UNEP as implementing agency requires interim reports as part of the SSFA with the country. These reports allow the country to identify in advance, any issues that it is

experiencing or where the activities are not progressing as planned, providing an early indication where UNEP may support, assess, and intervene where necessary.

Solomon Islands: Renewal of institutional strengthening

57. Summary of activities and funds approved by the Executive Committee:

Summary of activities		Funds approved (US \$)
(a)	Investment projects:	0
(b)	Institutional strengthening:	552,083
(c)	Project preparation, technical assistance, training and other non-investment projects:	708,324
	Total:	1,260,407
(d)	HFC activities funded from additional voluntary contributions	95,000

Progress report

58. Phase IX of the IS project for Solomon Islands demonstrated the high level of national organization that the Government has achieved through the NOU. The NOU under the Energy and Rural Electrification Division of the Ministry of Mines, Energy and Rural Electrification (MMERE) established working mechanisms with the public and private sector stakeholders; an e-licensing system was in the testing stage during this phase and is anticipated to be launched by the end of November 2023. The country fulfilled its data reporting obligations to the Ozone and Fund Secretariats in a timely manner. Solomon Islands sustained compliance with its HCFC reduction targets. Compliance was sustained through a holistic approach comprising of legislative measures, HCFC licensing and quota system, monitoring of ODS import, capacity building, involvement of the National Ozone Committee, Solomon Islands National University and the Refrigeration and Air-conditioning Association as well as public sector awareness-raising activities. All seven IS performance objectives were achieved during this phase.

Plan of action

59. Phase X will include: implementing the new e-licensing system for HCFCs and HFCs; implementation of the Pacific Harmonized Commodity Description and Coding System 2022; timely submission of Article 7 and country programme data; active engagement of the National Ozone Committee and RAC association in the implementation of the Montreal Protocol; coordination with stakeholders for the implementation of the HPMP; organisation of the World Ozone Day and development of information materials; and participation in regional and international meetings. Gender mainstreaming will be integrated into the implementation of the project.

Sustainability and risk assessment

60. The IS project can be successfully implemented in Solomon Islands under conditions of stable funding. Stakeholders, relevant associations, ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Steering Committee which is comprised of key inline ministries, the RAC sector and other relevant agencies. Given that Solomon Islands has adopted the PACHS2022, there will be risks of misclassification of HS Codes with ODS and HFC imports. Therefore, it is crucial that the NOU continue to work in collaboration with Customs including quarterly reconciliation of import statistics in monitoring HCFCs and HFCs through targeted awareness for importers and customs brokers on identifying HCFC/HFCs being imported with their proper HS codes.

(b) Institutional strengthening:	426,465
(c) Project preparation, technical assistance, training and other non-investment projects:	564,620
Total:	1,302,750
(d) HFC activities funded from additional voluntary contributions	150,000

Progress report

62. Phase VI of the IS project for Somalia has been implemented according to the plan and has fully achieved six out of seven performance objectives. During the reporting period, the NOU implemented the required activities including enforcement of the ODS regulations through the implementation of a licensing and quota system. The NOU further embarked on an awareness raising programme, trained Customs officers, clearing agents, Border Control Police, and refrigeration technicians. Additionally, the ODS regulations were under review to include HFCs.

Plan of action

63. The NOU is the responsible authority for coordination of the implementation of the IS, HPMP and HFC phase-down. The country will endeavor to implement its action plan to ensure sustained compliance with the Montreal Protocol. The NOU will ensure collaboration with stakeholders (customs, local technical institutions) and implementing agencies to control ODS consumption in the country; continue with the training programme for the technicians in the refrigeration sector; organize the training of newly-recruited and remaining Customs officers to support the implementation and enforcement of ODS regulations, including control measures of HCFCs. The NOU will also continue with the awareness-raising programme through mass media, NGOs, and workshops; continue the training of RAC technicians and customs officers; and implement the licensing and quota system for HCFCs to meet and sustain the 67.5 per cent reduction in 2025.

Sustainability and risk assessment

64. Two employees of the Government of Somalia are tasked with the responsibility of monitoring the project and report on any issues that may affect the continued operation of the project. This is over

and above the role of the National Ozone Steering Committee. The project is subjected to periodic internal and external audits to ensure adequate risk avoidance and management.

Timor-Leste: Renewal of institutional strengthening

65. Summary of activities and funds approved by the Executive Committee:

Sum	mary of activities		Funds approved (US \$)
(a)	Investment projects:		199,270
(b)	Institutional strengthening:		415,000
(c)	Project preparation, technical assistance, training and other non-investment projects:		504,529
		Total:	1,118,799
(d)	HFC activities funded from additional voluntary contributions		0

Progress report

66. Phase VI of the IS project for Timor-Leste demonstrated the high level of national organization that the Government has achieved through the NOU. The NOU continued to enforce the licensing and quota system in accordance with the Decree-Law No. No. 36/2012 and strengthened collaboration with the Directorate General for Customs to enforce the regulation, in particular the National Single Window System and inspection of all imported refrigerants during import clearance, strengthening the use of accurate HS code and developing the risk profiling for ODS and ODS-based equipment control. The country fulfilled its data reporting obligations to the Ozone and Fund Secretariats in a timely manner and has sustained compliance with the HCFC reduction targets. Compliance was sustained through a holistic approach comprising of legislative measures, HCFC licensing and quota system, monitoring of ODS import, capacity building, involvement of the National Ozone Committee and the RAC sector, as well as public sector awareness raising activities. The NOU continued to take the lead role in the ratification of

UNEP/OzL.Pro/ExCom/93/36 Annex I

the Kigali Amendment which is still in process. Timor-Leste fully achieved four of the IS performance objectives and partially met three.

Plan of action

67. The plan of action for phase VII includes: implementation of the licensing system for HCFCs and HFCs; implementation of activities as obligated under the Kigali Amendment; timely submission of Article 7 and country programme data; active engagement of National Ozone Committee and the RAC association in the implementation of Montreal Protocol; coordination with stakeholders for the implementation of the HPMP; organisation of the World Ozone Day celebrations and development of awareness materials; and participation in regional and international meetings. Gender mainstreaming will be integrated into the implementation of the project.

Sustainability and risk assessment

68. The IS project can be successfully implemented in Timor-Leste under conditions of stable funding. Stakeholders, relevant associations, and ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Committee which is comprised of key inline Ministries, the RAC sector and other relevant agencies. Since Timor-Leste has yet to ratify the Kigali Amendment, there is a risk of the country becoming non-compliant. Therefore, the NOU will need to work in close collaboration with key stakeholders to ensure timely preparation, finalization and ratification of the Kigali Amendment.

	Total	3,029,487
(d)	HFC activities funded from additional voluntary contributions	150,000

Progress report

70. Togo's NOU excelled in implementing phase XI of the IS project, fully achieving all seven of the performance objectives. The NOU collected ODS and HFC import data and submitted country programme and Article 7 data to the Fund and Ozone Secretariats, respectively; held annual meetings with stakeholders, including the National Ozone Committee, for effective coordination; and oversaw training for 673 RAC technicians and 372 customs officers under the HPMP. Ongoing activities included raising awareness about HCFC alternatives, relevant laws and regulations. Togo actively observed World Ozone Day and engaged in Montreal Protocol-related meetings.

Plan of action

71. In Phase XII of the IS project, the NOU will focus on: continuing information dissemination and awareness activities; coordinating the implementation of stage II of the HPMP; promoting and enforcing the licensing and quota system, providing importers with annual quota information; establishing the technician certification programme; sustaining monitoring and evaluation efforts; conducting annual stakeholder workshops to promote low-GWP HCFC alternatives; timely data collection and reporting to the Ozone and Fund Secretariats; and preparation and submission of the overarching strategy for the KIP.

Sustainability and risk assessment

72. The IS project can be successfully implemented in Togo under conditions of stable funding. Stakeholders, relevant associations, ministries and agencies actively participate in the development of recommendations and amendments to laws and regulations, as well as public awareness and promotional activities. The NOU is continuously guided by the National Ozone Steering Committee which is comprised of key line Ministries, RAC sector and other relevant agencies.

(d) HFC activities funded from additional voluntary contributions	0

Progress report

74. Although phase VIII of the IS project for Yemen was approved at the end of 2014 to be implemented in 2015-2016, the country was unable to implement it due to civil war and the cessation of NOU activities until 2020. In 2021, the new Government was established and arrangements for reinstating the NOU functions started. Despite the warfare complications on the ground, Yemen in collaboration with UNEP as implementing agency, successfully implemented phase VIII of the IS project during 2022 and 2023. Adopting an on-site focal point enabled the NOU to overcome security and movement difficulties on the ground, and monitor and control imports, uses and illegal trade of ODSs and facilitate the Article 7 and country programme data reporting, which were mostly done in a timely manner for 2020-2021.

Plan of action

75. Despite political tensions, the NOU, as per its roles, will design a coordination framework during phase IX to continue and expand its collaborations with relevant stakeholders in Government and private sectors. The NOU will intensify and facilitate discussions on the Kigali Amendment among relevant ministries, government agencies and institutions and relevant HFC sectors, to press toward ratification of the Kigali Amendment, as well as to set up procedures for HFC monitoring and control and reporting voluntarily. The NOU will continue producing awareness materials and programmes for the public and industry and preparing Montreal Protocol reports.

Sustainability and risk assessment

76. The NOU will enhance support to the focal points in the regions by building their capacities to overcome the risk of non-compliance toward the 2025 Montreal Protocol target for reductions in HCFC imports, on one hand. On the other hand, the NOU will speed up the actions toward setting up and enforcing provisions of a ban on the import of HCFC-based equipment.

Anexo II

CONSIDERACIONES PRELIMINARES DEL COMITÉ EJECUTIVO EN CUANTO A LA RENOVACIÓN DE LOS PROYECTOS DE FORTALECIMIENTO INSTITUCIONAL PRESENTADOS A LA 93ª REUNIÓN

Antigua y Barbuda

1. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Antigua y Barbuda (fase V), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité constata además que el Gobierno sigue de cerca la implementación del sistema de licencias y cuotas y que vigila sus fronteras en prevención del comercio ilegal. El Comité valora el establecimiento de un Comité Consultivo Independiente que a futuro podrá cumplir un importante papel en cuanto a guiar y respaldar a la oficina nacional del ozono en su labor. El Comité manifiesta su confianza en que el Gobierno de Antigua y Barbuda seguirá implementando con eficacia el proyecto de fortalecimiento institucional y consolidando los logros alcanzados en materia de eliminación de HCFC.

Benin

2. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Benín, el Comité Ejecutivo felicitó al país por haber presentado a las Secretarías del Ozono y del Fondo, respectivamente, los datos del artículo 7 y del programa país para los años 2021 y 2022 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció además los importantes avances logrados por Benín en cuanto a eliminar el consumo de SAO, controlar su importación a través del sistema de licencias y cuotas y capacitar a funcionarios aduaneros y técnicos en refrigeración. El Comité observa con satisfacción los esfuerzos desplegados para reducir el consumo de HCFC y HFC y confía en que el país siga implementando con eficacia el PGEH y el proyecto de fortalecimiento institucional a fin de alcanzar al 1º de enero de 2025 la reducción del 67,5 por ciento en el consumo de HCFC prevista en el Protocolo de Montreal.

Estado Plurinacional de Bolivia

3. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para el Estado Plurinacional de Bolivia (fase XII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité tomó nota además de las medidas dispuestas por el país para eliminar el consumo de SAO, controlar la importación de HCFC a través del sistema de licencias y cuotas y capacitar a funcionarios aduaneros y técnicos en refrigeración. El Comité también tomó nota con satisfacción de las actividades iniciadas a fin de facilitar la aplicación de la Enmienda de Kigali. El Comité reconoció el esfuerzo y los desafíos que enfrenta el Gobierno y manifiesta su confianza en que durante el próximo trienio pueda seguir implementando la etapa II del PGEH y el proyecto de fortalecimiento institucional y logre avanzar en la preparación del plan de aplicación de la Enmienda de Kigali a fin de lograr la reducción del 65 por ciento en el consumo de HCFC al 1º de enero de 2025 y sentar las bases para avanzar hacia la reducción de los HFC prevista en la Enmienda de Kigali.

Burkina Faso

4. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Burkina Faso (fase XV), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal.

El Comité reconoció los importantes avances logrados por Burkina Faso en cuanto a eliminar el consumo de SAO, controlar su importación a través del sistema de licencias y cuotas y capacitar a funcionarios aduaneros y técnicos en refrigeración. El Comité observa con satisfacción los esfuerzos realizados en cuanto a reducir el consumo de HCFC y HFC y confía en que Burkina Faso seguirá implementando con eficacia el PGEH y el proyecto de fortalecimiento institucional a fin de reducir el consumo de HCFC en un 67,5 por ciento al 1º de enero de 2025.

Islas Cook

5. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Islas Cook (fase VII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité toma nota de que el Gobierno ha llevado a la práctica las recomendaciones formuladas en la verificación de consumo de HCFC en cuanto a reforzar el control del comercio de HFC, cumplir las obligaciones de eliminación de HCFC previstas en el Protocolo de Montreal y limitar el consumo según acuerdo con el Comité. El Comité confía en que el Gobierno de Islas Cook seguirá implementando con eficacia el proyecto de fortalecimiento institucional y consolidando los logros alcanzados en cuanto a la eliminación de HCFC para dar inicio a la reducción de los HFC prevista en la Enmienda de Kigali.

Dominica

6. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Dominica (fase VII), el Comité Ejecutivo manifestó al Gobierno su satisfacción por transmitir a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció los obstáculos y dificultades que ha enfrentado el país tras los daños causados por el Huracán María, sumados a la pandemia del Covid-19 y a problemas administrativos al interior de la ONO y del Gobierno. El Comité valora la dedicación del nuevo encargado de la oficina del ozono, la reestructuración de la oficina y los esfuerzos realizados para superar el retraso. El Comité Ilamó al Gobierno de Dominica a consolidar las medidas dispuestas, mantener la continuidad de los esfuerzos por cumplir con el Protocolo de Montreal y llevar a cabo las actividades de la etapa I del PGEH, y próximamente las de fortalecimiento institucional.

Gabón

7. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Gabón (fase XII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció además los importantes avances logrados por el país en cuanto a eliminar el consumo de SAO, controlar su importación a través del sistema de licencias y cuotas y capacitar al personal aduanero. El Comité valora los esfuerzos realizados en cuanto a reducir el consumo de HCFC y HFC y confía en que el país siga implementando con eficacia el PGEH y el proyecto de fortalecimiento institucional a fin de reducir el consumo de HCFC en un 67,5 por ciento al 1º de enero de 2025 según lo previsto en el Protocolo de Montreal.

Guyana

8. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Guyana (fase IX), el Comité Ejecutivo manifestó al Gobierno su satisfacción por haber transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció los desafíos y dificultades que enfrenta el país a causa de los persistentes efectos de

la pandemia del Covid-19 y de los problemas administrativos ocurridos al interior de la ONO y del Gobierno. El Comité valora la dedicación del encargado y del asistente de la oficina del ozono y de la labor realizada para lograr resultados. El Comité llamó al Gobierno a consolidar las medidas dispuestas, mantener la continuidad de los esfuerzos por cumplir con el Protocolo de Montreal y a implementar las actividades de la etapa II del PGEH, y próximamente las de fortalecimiento institucional.

Iraq

9. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Iraq (fase VI), el Comité Ejecutivo observa con satisfacción que el país ha transmitido a las Secretarías del Ozono y del Fondo, respectivamente, los datos del artículo 7 y del programa país del año 2022 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité destacó la importancia de la coordinación entre las partes interesadas, el gobierno y el sector privado a fin de lograr su plena participación en los proyectos del Fondo Multilateral, en especial la etapa II del PGEH orientada a lograr la meta de reducción fijada en el Protocolo de Montreal para el año 2025. El Comité valora los esfuerzos desplegados por el Gobierno en cuanto a impulsar la ratificación de la Enmienda de Kigali y destacó que Iraq mantiene en operación un eficaz sistema de licencias y cuotas de HCFC al que ha agregado el control de los HFC, según lo previsto en la Enmienda de Kigali, garantizando así la sustentabilidad de la eliminación a fin de cumplir las futuras metas de reducción. El Comité, por consiguiente, confía en que durante el próximo trienio Iraq continuará ejecutando con éxito el PGEH y el proyecto de fortalecimiento institucional a fin de seguir reduciendo el consumo de HCFC según lo previsto en el Protocolo de Montreal y de dar inicio a las actividades contempladas en la Enmienda de Kigali.

Madagascar

10. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Madagascar (fase X), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció los importantes avances logrados por Madagascar en cuanto a eliminar el consumo de SAO, controlar su importación a través del sistema de licencias y cuotas y capacitar a funcionarios aduaneros y técnicos en refrigeración. El Comité valora los esfuerzos desplegados en términos de reducir el consumo de HCFC y confía en que el país siga implementando con eficacia el PGEH y el proyecto de fortalecimiento institucional a fin de reducir el consumo de HCFC en un 67,5 por ciento al 1º de enero de 2025 según lo previsto en el Protocolo de Montreal.

Mauricio

11. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Mauricio (fase VIII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité valoró las medidas adoptadas para eliminar el consumo de HCFC y controlar la importación de HCFC a través del sistema de licencias y cuotas, así como la estrecha colaboración con el servicio de aduanas y la capacitación de técnicos en refrigeración. El Comité reconoció los esfuerzos desplegados para establecer un sistema de licencias para HFC, por lo que confía en que en el próximo trienio el Gobierno de Mauricio seguirá implementando las actividades de eliminación de HCFC y el proyecto de fortalecimiento institucional y presentará un plan de aplicación de la Enmienda de Kigali que permita cumplir las obligaciones contraídas en virtud del Protocolo de Montreal y de la Enmienda de Kigali.

Estados Federados de Micronesia

12. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para los Estados Federados de Micronesia (fase IX), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité constató que el país sigue implementando el sistema de licencias para HCFC y el PGEH, que realiza actividades de extensión y sensibilización y que participa en las reuniones de redes regionales. El Comité manifiesta su confianza en que el Gobierno de Micronesia seguirá implementando con eficacia el proyecto de fortalecimiento institucional a fin de mantener la continuidad de la eliminación de HCFC y cumplir las futuras medidas de control del Protocolo de Montreal y de la Enmienda de Kigali.

Paraguay

13. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para el Paraguay (fase XII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité valora la capacitación de técnicos en buenas prácticas de refrigeración y manejo de sustancias alternativas, el apoyo de las partes intervinientes concretado a través del comité consultivo, y el compromiso de elaborar normas de manejo de refrigerantes alternativos. Asimismo, el Comité tomó nota con satisfacción de las actividades iniciadas a fin de facilitar la aplicación de la Enmienda de Kigali. El Comité reconoció el esfuerzo y los desafíos que enfrenta el Gobierno del Paraguay y confía en que durante el próximo trienio siga implementando las actividades del PGEH y del proyecto de fortalecimiento institucional y elabore un plan de aplicación de la Enmienda de Kigali que permita reducir el consumo de HCFC en un 67,5 por ciento al 1º de enero de 2025 y sentar las bases para avanzar a la reducción de los HFC según lo previsto en la Enmienda de Kigali.

Santa Lucía

14. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Santa Lucía (fase XII), el Comité Ejecutivo manifestó al Gobierno su satisfacción por haber transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció los avances logrados en la fase anterior pese a la pandemia y valoró la dedicación de la oficina del ozono y de su encargado, así como los esfuerzos desplegados para mantenerse en situación de cumplimiento. El Comité aprecia además las perseverantes y decisivas medidas adoptadas por el Gobierno para mantener la continuidad de las tareas previstas en el Protocolo de Montreal, en especial las actividades de la etapa II del PGEH y próximamente las de reducción de los HFC.

Islas Salomón

15. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Islas Salomón (fase X), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité constató que el país sigue implementando el sistema de licencias para HCFC y el PGEH, que realiza actividades de extensión y sensibilización y que participa en las reuniones de redes regionales. El Comité manifiesta su confianza en que el Gobierno siga implementando con eficacia el proyecto de fortalecimiento institucional a fin de mantener la continuidad de la eliminación de HCFC y cumplir las futuras medidas de control previstas en el Protocolo de Montreal y la Enmienda de Kigali.

Somalia

16. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Somalia (fase VI), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité destacó que Somalia ha adoptado medidas para agregar los temas relativos a la Enmienda de Kigali a la normativa de regulación de las SAO. El Comité reconoció los esfuerzos desplegados por el Gobierno y confía en que el país continuará reduciendo gradualmente el consumo de HCFC hasta alcanzar el 67,5 por ciento previsto en el Protocolo de Montreal para el 1º de enero de 2025 y la eliminación total prevista para el 1º de enero de 2030. El Comité confía además en que el país presente un plan de aplicación de la Enmienda de Kigali y dé inicio a la reducción de los HFC prevista en la Enmienda de Kigali.

Timor-Leste

17. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Timor-Leste (fase VII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité constató que el país está implementando el PGEH, que avanza en el proceso de consultas nacionales para la ratificación de la Enmienda de Kigali, que realiza actividades de extensión y sensibilización y que participa en las reuniones de redes regionales. El Comité manifiesta su confianza en que el Gobierno siga implementando con eficacia el proyecto de fortalecimiento institucional a fin de mantener la continuidad de la eliminación de HCFC, facilitar la ratificación de la Enmienda de Kigali y cumplir las futuras medidas de control previstas en el Protocolo de Montreal y la Enmienda de Kigali.

Togo

18. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Togo (fase XII), el Comité Ejecutivo observa con satisfacción que el Gobierno ha transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité reconoció los importantes avances logrados por Togo en cuanto a eliminar el consumo de SAO y HFC y controlar su importación a través del sistema de licencias y cuotas y de capacitar a funcionarios aduaneros y técnicos en refrigeración. El Comité tomó nota con satisfacción de los esfuerzos desplegados en cuanto a reducir el consumo de HCFC y HFC y confía en que el país siga implementando con eficacia la etapa II del PGEH y el proyecto de fortalecimiento institucional a fin de reducir el consumo de HCFC en un 67,5 por ciento al 1º de enero de 2025 según lo previsto en el Protocolo de Montreal y de preparar el inicio de la reducción de los HFC contemplada en la Enmienda de Kigali.

Yemen

19. Tras tomar conocimiento del informe adjunto a la solicitud de renovación del proyecto de fortalecimiento institucional para Yemen (fase IX), el Comité Ejecutivo observa con satisfacción que el Gobierno ha retomado sus actividades y transmitido a las Secretarías del Fondo y del Ozono, respectivamente, los datos del programa país y del artículo 7 que indican el cumplimiento con lo previsto en el Protocolo de Montreal. El Comité constató que el despliegue de coordinadores en terreno permitió a la oficina nacional del ozono superar las dificultades de seguridad y movimiento y que la ONO vigila y controla la importación, uso y comercio ilegal de SAO. El Comité confía en que el Gobierno siga implementando con eficacia el proyecto de fortalecimiento institucional, manteniendo los logros alcanzados en cuanto a la eliminación de HCFC, promoviendo la ratificación de la Enmienda de Kigali ante los órganos e instituciones estatales y otros sectores relevantes y disponiendo procedimientos para la supervisión, control y notificación voluntaria de los HFC.

AMENDMENT TO UNEP'S WORK PROGRAMME 2023

Presented to the 93rd Meeting of the Executive Committee of the Multilateral Fund for the Implementation of the Montreal Protocol

October 2023

United Nations Environment Programme

A. INTRODUCTION

1. UNEP's Work Programme 2023 was approved at the 92nd Meeting of the Executive Committee of the Multilateral Fund for the Implementation of the Montreal Protocol.

2. This document, as submitted for consideration to the 93rd Meeting of the Executive Committee, represents an Amendment to that Work Programme.

B. SUMMARY OF THE WORK PROGRAMME AMENDMENT FOR 2023

3. Consistent with the Business Plan 2023-2025, this Amendment comprises funding requests for

- Support for the implementation of Institutional Strengthening projects in 19 countries.

- Support in preparation of HCFC phase-out Management Plans (stages 2 and 3) in one country.

- Support in preparation of the Kigali HFC Implementation Plan (KIP) in six countries.

- Support in preparation of national inventories of banks of waste-controlled substances and national action plan in **11** countries.

- Request for extension of Enabling Activities for HFC Phase-down project implementation period in **one** country.

4. Details of the Work Programme Amendment and the total requested funding by project groups are presented in Table 1.

5. Details of the Request for extension of EA project implementation period is presented in Table 2.

6. Summary of the Work Programme Amendment is presented in Table 3.

policies		. A consultative meeting w					
relevant stakeholders is planned to be held in October							

	2023, and a validation workshop in December 2023. The final document will be submitted to the Ministry of Justice and Constitutional Development. The Government of South Sudan has already issued HCFC import quotas for 2022 and 2023 in accordance with the Montreal Protocol control targets. Although the ODS regulations are not enacted, HCFC licensing system is in place and operational.	
Training of customs and other law enforcement agents.	The NOU has conducted a training for customs and other law enforcement officers whereby 30 officers were trained. The participants were drawn from Customs Department, Ministry of Trade and the National Bureau of standards. The trainings have enhanced the capacity of the law enforcement officers on monitoring and prevention of illegal trade in HCFCs and other controlled substances under the Montreal Protocol.	UNEP
Capacity building of RAC Technicians.	A training has been conducted in 2022 for 45 (2 female) refrigeration technicians from both formal and informal set-up have been trained on good servicing practices including safe use of new generation of refrigerants such as hydrocarbon technologies. The NOU has conducted 2 training workshops in the country to raise awareness and promote refrigeration code of conduct and good servicing practices.	UNEP
Monitoring and Evaluation of the implementation of HPMP	To ensure effective implementation of all project activities under the HPMP Stage I, the NOU continued monitoring implementation of project activities. Quarterly monitoring activities were held.	UNEP
HPMP Stage I Tranche 2 (lis	ted below are the activities to be implemented during stag	e I tranche II)
Activity	Description	Implementing Agency
finalization of the ODS regulation.	Two consultative meetings will be held with national legislation experts for the finalization of acts and revision of the ODS regulations	UNEP
Capacity building for Customs officers and law enforcers	One training workshop was conducted to train 20 Custom officers in March 2023. Two trainings are planned to train 60 custom officers by the end of 2023.	UNEP
Strengthening capacity of RAC Association	quarterly meetings of the Refrigeration Technicians Association will be held to assess the performance, needs and disseminate latest technology development.	
Capacity building for RAC technicians	4 training workshops for 80 refrigeration technicians on good refrigeration/ servicing practices, including recovery and recycling of refrigerants and safe handling of flammable refrigerants are planned to be held during the period 2023 and 2024.	UNEP
Awareness raising and outreach	Various awareness materials to achieve HCFC phase- will be developed, published and distributed.	UNEP
Project coordination and monitoring	The NOU ensured that thegreed activities under the HPMP implementation plan are implemented timely. UNEP has conducted a verification report on the implementation of stage I, tranche 1 of HPMP. UNEP will prepare a verification report on the	UNEP

8. How will activities related to implementation of the Kigali Amendment to phase down HFCs be considered during project preparation for stage II of the HPMP?

The NOU South Sudan is currently working with relevant entities in the government to ratify the Kigali Amendment. South Sudan's HPMP stage II and Kigali amendment ratification activities will be implemented in parallel. The overarching strategy will be based on strengthening the implementation of the existing quota and licensing system and technical capacity building of trainers and technicians, to support appropriate technology choices. The Government will promote the use of zero-ODP and zero-GWP refrigerants.

9. How will the Multilateral Fund gender policy be considered during project preparation?

Under previous stages of the HPMP women's attendance at training workshops was promoted and efforts were provided in raising awareness on the need for gender-friendly work environments. This work will continue under stage II of the HPMP. The Fund Secretariat's operational policy on gender mainstreaming will be applied.

MULTILATERAL FUND FOR THE IMPLEMENTATION OF THE MONTREAL PROTOCOL KIGALI-HFC IMPLEMENTATION PLAN (KIP) PROJECT PREPARATION (PRP) KIGALI HFC PHASE DOWN PLAN (OVERARCHING STRATEGY)

2. Brief background/description/information on approved relevant projects and multi-year agreements as follows:

Current progress in implementation of any funded HFC-related project (enabling activities or stand-alone HFC investment projects)

- Survey of consumption, distribution and uses of various alternatives to ODSs for Eritrea was conducted in 2016.
- Currently there are no implementation activities of any funded HFC-related project in Eritrea. Eritrea's Enabling Activities project was approved at the 80th meeting of the Executive Committee with a total funding of US \$92,822 plus agency support costs for UNEP. The project was successfully completed in June 2021.
- Eritrea ratified the Kigali Amendment on 7 February 2023
- Licencing system for import/export of HFCs is established. There are no quotas for import/export of HFCs.
- B) Current progress in ongoing HCFC phase-out management plan (HPMPs)
- HCFC baseline consumption for Eritrea is determined as 1.09 ODP tones of HCFCs.
- The Stage I HCFC Phase-out Management Plan for Eritrea was approved in July 2012 at the 67th Meeting of the Executive Committee of the Multilateral Fund for the implementation of the Montreal Protocol. The

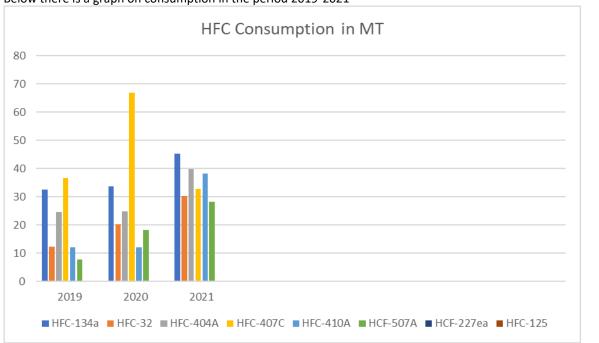

third tranche under the HPMP Stage I was approved at the 85th ExCom in June 2020.

- The Stage II HPMP for Eritrea was approved at the 91st ExCom meeting in December 2022 to meet the total phase out of HCFC consumption.
- Among the policy measures, the enforcement of a certification system for technicians of the servicing sector is a key element for the effective phase-out of HCFCs and for future replacement by HFC-free alternatives.

Substance/blend	Sector	2019	2020	2021
HFC-134a	RAC servicing	32.52	33.60	45.3
HFC-227ea	Fire fighting	0.00	0.00	0.00
HFC-125	Fire fighting	0.0	0.00	0.00
HFC-32	RAC servicing	12.2	20.34	30.18
R-404A	RAC servicing	24.59	24.76	39.8
R-407C	RAC servicing	36.6	66.93	32.68
R-410A	RAC servicing	11.95	11.97	38.2
R-507A	RAC servicing	7.78	18.12	28.12

4. Based on the consumption data given above, please provide a description of the sector/sub-sector that use HFCs in the <u>country</u>, including a short analysis and explanation of the consumption trends (i.e., increasing or decreasing)

The Refrigeration and Air-Conditioning sector is the largest user of HFCs in Eritrea. HFC-134a and R-404A are widely used refrigerants in RAC servicing sector, R-404A is the first choice in commercial and industrial refrigeration. It is noticed that consumption of R-410A is increasing in the last three years. R-410A is still widely used in split AC units, heat pumps with smaller capacity for domestic AC. 407C is mostly widely used in AC and 507A is used in low temperature applications mostly in cold rooms.

Below there is a graph on consumption in the period 2019-2021

7. How will activities related to preparing the KIP be linked to the current stages of the HPMP being implemented in the country? (OPTIONAL)

Synergies from ongoing and future HPMP activities will be assessed and integrated into the HFC phase-down plan development without additional costs. Success stories and lessons learned from HPMP implementation will be taken into consideration in preparing the KIP project.

8. How will the Multilateral Fund gender policy be considered during project preparation?

Following the ExCom decision 84/92, as well as, UNEP and UNIDO gender mainstreaming policies, HPMP Stage II implementation and KIP will consider gender equality and women's empowerment during the entire project implementation.

During the implementation of KIP and HPMP Stage II, NOU will aim to seek stakeholders' inputs on how to integrate gender specific indicators in planning, implementation, and reporting process of each component. Participation at all events and activities will aim to achieve gender balance. These activities include training and capacity building on adoption of HFC alternatives.

Full utilization of gender-based organisations will be sustainable in order to meet the project's components. The stakeholder consultations and training workshops will aim to incorporate sessions on gender issues to further sensitize participants on the importance of gender mainstreaming and women empowerment.

• The current progress in implementation of any funded HFC-related project (enabling activities or standalone HFC investment projects)

• The current progress in ongoing HCFC phase-out management plan (HPMPs)

• Consideration of integrating HFC phase-down activities with HPMP activities taking into account previously approved HFC-related projects, if this information is available.

Kigali Amendment ratification: 11 July 2023.

Enabling Activities and other HFC related projects

Following the outcomes of the 80th Meeting of the Executive Committee of the Multilateral Fund for the Implementation of the Montreal Protocol and subsequently Decision 80/50(d), the 81st Meeting of the Executive Committee approved Georgia enabling activities (EA) for HFC phase-down towards the early ratification of the Kigali Amendment. The main objective of the EA project was to prepare the country for the ratification of the Kigali Amendment to the Montreal Protocol. Legal documents, stakeholder engagement, and awareness raising events have been completed in the project, which led to the ratification of the Kigali Amendment on 11 July 2023. The establishment of the HFC licensing and quota system is expected to be in place by January 2024.

Based on Decision XXVI/9 (paragraph 4) of the 26th Meeting of the Parties, the 74th Meeting of the Executive Committee approved the ODS alternatives survey for Georgia. The main goal of the survey was to determine consumption, distribution and uses of various alternatives to ODSs. Under the survey, data on import-export and consumption of alternatives to ODSs for 2010-2015 were collected, and growth scenarios related to the consumption of high-GWP HFCs and low-GWP alternatives were developed.

HPMP

To achieve complete phase-out of the HCFCs consumption, the two-phase approach aimed at 35% reduction of HCFC consumption by 2020 and the overall consumption reduction rate of 97.5% by 2030, keeping 2.5% of the baseline consumption for servicing needs until 2040.

Georgia started implementing HPMP stage I in 2011, covered the period of 2011-2020 and fully completed it in April 2023. The main outcome of the Stage I is the compliance with the Montreal Protocol provisions including the HCFC phase-out targets

HPMP stage II started in 2022. Stage II will be implemented during the period 2021-2031. HPMP Stage II consists of the following components: policy, regulatory and institutional support; training, capacity building and awareness; demonstration projects; supporting good servicing practices; and project coordination. At this stage, the following activities are implemented within the first tranche:

- Web-based electronic reporting and permit system for HCFC import and consumption and training for end-users and technicians for using the electronic reporting tool
- Study on policy options for incentivizing the HCFC reuse management and necessary legislative changes, study on feasible infrastructure and business model for R&R
- Professional qualification standards for the Level 4 technicians and practical exam in the certification process
- Test for practical exams to be integrated in the certification examination and additional multiple versions of test for written examination.
- Training workshops on the import controls for ODS/non-ODS for customs officers and Customs Quick Tool for screening ODS
- Training workshops for environmental inspectors on the control of compliance with the ODS regulations
- Roundtable meetings for policy dialogue to facilitate the alignment of policies across respective sectors and to reinforce the HCFC phase-out and PFC phase-down in the country.

3. Overview of current HFC consumption in metric tonnes by substance (last three years)							
Substance/blend	Sector	2020	2021	2022			
HFC-134a	Domestic / commercial / transport refrigeration, MAC systems, chiller systems, heat pumps	108.7	125.2	189.1			
R-404A	Commercial / transport / industrial refrigeration	71.1	93.9	84			
R-410A	Room air-conditioning, chiller systems, heat pumps, other air-conditioning systems	27.8	62.5	56.7			
R-407C	Industrial refrigeration, room air-conditioning, chiller systems, heat pumps, other air-conditioning systems	3.8	2.2	15			
R-507A	Industrial refrigeration	5.4	11.6	25.1			
R-32	Room air-conditioning, chiller systems, other air- conditioning systems	2.4	4.3	5.3			
R-407A	Commercial refrigeration	0.1	0	0			
Total	RAC servicing sector	219.3	299.7	375.2			

4. Based on the consumption data given above, please provide a description of the sector/sub-sector that use HFCs in the country, including a short analysis and explanation of the consumption trends (i.e., increasing or decreasing)

The HCFC baseline of Georgia is 5.3 ODP tonnes with consumption in the refrigeration and air-conditioning servicing sector only. ODS consumption fluctuated between 2014 and 2019, but the overall trend was increasing. This was mainly due to stockpiling by the importers in anticipation of the reduced HCFC import quota. The decline since 2020 is caused by the reduction in the HCFC and the Covid-19 pandemic.

HFC imports, unlike ODS, are increasing during the period 2010 to 2020. HFC consumption increased 28.3% from 2015 to 2016, and 27.8% from 2018-2019. Overall, there was 52.9% increase from 2015-2020, which corresponds to an average annual increase of 8.9%. During the period 2010-2020, HFC consumption increased by 256%, which corresponds to an average annual increase of 13.5%.

HFCs are the main HCFC alternatives which are currently imported. Hydrocarbons or other natural refrigerants

still have a small market share. HFC-134A is widely used and represents 60.8% of the refrigerant imports, followed by R-410A with 19.2% and R-404A with 13.8% of the imports.

HFCs are commonly used in the stationary air-conditioning sector (39.3 % of the HFC consumptions) and the commercial sector (34.8% of the HFC consumption), followed by the MAC sector with 18. % of the HFC consumption.

Small self-contained air-conditioning and small split air-conditioning are two different market sub-sectors. The first one includes equipment used for the space cooling of residential and commercial buildings, whereas the second one includes units used for the cooling of single rooms. The small self-contained air-conditioning sector consists of window-mounted, portable, and through-the-wall units.

The requested funding is needed for the preparation of the overarching HFC phase-down strategy, stage I of the Kigali HFC phase-down plan (KIP) and its tranche 1, to meet the 10% reduction in HFC consumption in 2029.

5.	Description of information that needs to be gathered during project preparation. Explain how this
	data will be gathered

Information Description					
neededODSReview available data and collection of additional sector-specific data through interviews with sector experts and additional questionnaires to ensure the reliability of historical data, and in particular the estimated data during the years 2010-2020 which were not part of the ODS alternatives survey. The data collection will cover sub-sectors and cover data on installed and imported equipment, refrigerant and age of equipment in sub-sectors, refrigerant charge, leakage rates, energy-efficiency and prices of alternative refrigerants / equipment.					
6. Activities to b	e undertaken for project preparation and funding (decisio Activity	Indicative funding (US \$)	Agency		
including surveys be analyzed to es stakeholders and a prepared and disse equipment, with p Data collection will imported equipment rates, energy efficit Overarching strates tranche 1 for the re 10 per cent reduction and endorsement in develop or update refrigerants, and th	consumption and its sectoral distribution will be conducted, of workshops in the servicing sector. The data collected will timate HFC baselines for compliance. Consultations with sector experts will be carried out. Questionnaires will be eminated to update available data on ODS alternatives and articular attention to the estimated data from 2016 to 2023. 8. How will the Multilateral Fund gender policy be considered during project preparation?

The Government of Georgia is aware of the Multilateral Fund gender policy contained in ExCom document 84/73, the related Executive Committee decision 84/92, and subsequent decision 92/40 requesting implementing agencies to include the mandatory requirements and performance indicators contained in document 92/51 (Annex XXII) when submitting stages of multi-year agreement projects, such as HPMPs and KIPs, starting from ExCom-94. During project preparation, relevant stakeholders will be sensitized on the gender policy. Efforts will be made to allow female stakeholders to contribute to the project preparation. To the extent possible, gender-disaggregated data will be collected.

Multilateral Fund FOR THE IMPLEMENTATION OF THE MONTREAL PROTOCOL KIGALI-HFC IMPLEMENTATION PLAN (KIP) PROJECT PREPARATION (PRP) KIGALI HFC PHASE DOWN PLAN (OVERARCHING STRATEGY)

Part I: Project Information

Project title:	Kigali HFC Implementation plan (KIP)			
Country:	Mali			
Lead implementing agency:	UNEP			
Cooperating agency:	UNDP			
Implementation period for stage I of the KIP:	2026-2029			
Duration of PRP implementat (please specify): 24 months	ion (i.e., time (in months) f	rom the approval of PRP to submission of the KIP

agreements as follows:	in implementation of any	approved relevant pr	ect (enabling activities or				

- The current progress in ongoing HCFC phase-out management plan (HPMPs)
- Consideration of integrating HFC phase down activities with HPMP activities taking into account previously approved HFC-related projects, if this information is available.

Previous activities related to the Kigali Amendment, HFC Phase-down and the HCFC Phase-out Management Plan (HPMP) are summarized below:

• **The ODS Alternatives Survey**: The 75th Executive Committee (ExCom) meeting in November 2015 approved US\$ 70,000 (excluding PSC) for Mali to implement the "Survey of ODS alternatives at the national level" through UNEP. The objective was to assist Mali to better understand their historical consumption and predict future consumption trends of ODS Alternatives in different sectors and sub-sectors. The ODS Alternatives Survey Report was prepared and submitted to the Multilateral Fund Secretariat accordingly. Project was completed in September 2017.

- The Enabling Activities for HFC phase-down project (EA) was approved at the 81st ExCom meeting in June 2018 at the total amount of US\$ 150,000 through UNEP. Under the project, several capacity building workshops were conducted for the relevant stakeholders and Country Assessment Report was prepared, which summarizes the existing contexts, challenges, and recommendation for Mali to phase down HFC in different aspects including legislative framework, institutional mechanism, market and HFC usage situation, training needs assessment and public outreach. Project was completed. Mali has put in place HFC licensing system under the Kigali Amendment as per Article 4B and the Government is working on criteria on quota allocation of HFCs, which is expected to be implemented from 1 January 2024. The online system on quota and license was developed and has been launched since June 2019 and is now fully operational (voluntary basis). During the EA project, training sessions were conducted on the operation of the e-licensing system for importers, custom brokers, and customs authority. Mali implements the license on per shipment basis. Mali ratified the Kigali Amendment on 31st Mars 2017.
- HCFC Phase-out Management Plan: The HCFC Phase-out Management Plan (HPMP) of Mali was approved at the 63rd ExCom meeting in April 2011. The funding level of US \$617,400, comprising US \$280,000, plus agency support costs of US \$36,400 for UNEP, and US \$280,000, plus agency support costs of US \$21,000 for UNDP was approved in principle to Mali to implement the proposed strategies and actions under the HPMP. The Government of Mali had agreed to establish an estimated baseline of 15.0 ODP tonnes as its starting point for sustained aggregate reduction in HCFC consumption, calculated using actual consumption of 14.4 ODP tonnes reported for 2009 and consumption of 15.5 ODP tonnes estimated for 2010.

3. Current p	3. Current progress in the implementation of Enabling Activities for HFC phase-down project						
Activity	Description	Implementing agency					
Facilitate early ratification of the Kigali Amendment	The NOU identified additional national stakeholders relevant to the Kigali Amendment and discussed the impact of Kigali Amendment ratification with all relevant stakeholders. The Country Assessment Report which summarizes the existing contexts, challenges, and recommendation for Mali to phase down HFC in different aspects including legislative framework, institutional mechanism, market and HFC use information, training needs assessment and public outreach was prepared and finalized. Based on the Country Assessment Report, the national stakeholder consultation workshop was organized to obtain feedback and finalize the report,	UNEP					
Capacity- building & training for alternatives	Mali conducted a series of round table discussions on low-GWP and zero- GWP alternatives to enhance understanding of the provisions of the Kigali Amendment, the implications for them and of additional measures required to support the implementation of the Kigali Amendment. NOU organized meetings with the Institute of Standard of Mali, General Department of Energy, General Department of Petroleum, General Department of Standard and Curriculum, and Vocational Training School, Vocational Training Institutes to discuss on implementation of CS ISO standard (nationally adopted ISO 5149 and ISO 817), safety standard on transport and storage of flammable and toxic gasses, funding and equipping of vocational training testing centers, curriculum development and certification mechanisms. All agencies have acknowledged the need to strengthen certification programme as well as to establish the requirements related to safety standards on transport and storage of flammable and toxic gasses, funding and equipping of vocational training testing centers, and curriculum development.						

Article 4B licensing & Reporting	The existing Sub-decree on ODS Management was reviewed through a widely participated process. Provisions on licensing system as well as data reporting and monitoring system for (i) ODSs and HFCs in bulk and (ii) all types of refrigeration and air-conditioning (RAC) equipment using refrigerants controlled under the Montreal Protocol.
	 Provision of quota system for HCFCs and HFCs. HFC phase-down obligations as an Annex, which would guide the NOU in the establishment of quota for HFCs.
	Please note that Mali reported to the Ozone Secretariat that the country has
Online Application on Quota and License for HFCs	The system enables the NOU to track the remaining quota available before issuing the import license and generate a report of import by importers to track the actual import of controlled substances as the NOU requires the importers to upload the customs declaration form and supporting document to confirm the actual quantity against the license.

***Source:** Data during 2012-2015 from ODS Alternatives Survey Report, 2016-2017 from Country Assessment Report and 2018-2020 from Article 7/Country Programme.

4. Based on the consumption data given above, please provide a description of the sector/sub-sector that use HFCs in the country, including a short analysis and explanation of the consumption trends (i.e., increasing or decreasing)

The above table reveals that HFC consumption in Mali has been dominated by HFC-134a and R-410A respectively. Since 2012, HFC consumption in Mali has been steadily increased mainly due to the following reasons:

- Implementation of HPMP to reduce HCFCs consumption resulted in the introduction of HFCs to replace HCFCs in some sectors in particular R-410A in the air-conditioning sector.
- Rapid economic growth of the country in recent years, which in turn increased the demand for refrigerant for installation and servicing in air-conditioners and mobile air-conditioners (MAC).
- Due to COVID-19 pandemic, the consumption of HFCs in Mali decreased from the consumption in 2019 due to (i) liquidity of business/household incomes to service RAC/MAC equipment (preferring to keep cash for emergency purpose) and (ii) fear of disease transmission (postponing routine servicing and continue using RAC/MAC equipment if they are not totally malfunction).

•

Based on the study conducted under the ODS alternatives survey (2017), the largest subsectors that consume HFCs are MAC subsector, rooms and other air-conditioning subsector and chiller sub-sector. Although large refrigeration subsectors (cold storage) consume significant amounts of refrigerant, majority of the large refrigeration systems use ammonia. Sector specific detail on the use of HFCs and other ODS alternatives are as follow:

 <u>Domestic refrigeration</u>: The servicing of domestic refrigeration sub sector in Mali is dominated by R-134a refrigerant which is used in servicing of most stand-alone units such as fridges and freezers. The use of R-600a is slowly gaining momentum in servicing of domestic refrigeration appliances. Most imported domestic fridges now are charged with R-600a. The country is promoting the use of Hydrocarbon refrigerants and most technicians have undergone training where they are taught how to handle low GWP refrigerants such as R-600a safely. The influx of the local market with imported R-600a units is causing a sharp increase in the imports of this refrigerant which has a zero ODP and very low GWP.

There challenge relating to the use of R-600a is its flammability. The country has intensified training and awareness programmes. Wholesalers and distributors have also been trained on storage and handling as well as making sure that the refrigerant is sold to trained technicians only. The advantages of using R-600a are that the reduced charge makes it very economical to use and that it is energy efficient. Its Energy Efficiency makes it favourable as it consumes about 10% less energy compared to ozone depleting refrigerants such as R12.

• <u>Commercial refrigeration</u>: The commercial refrigeration sector in Mali uses several ODS alternative refrigerants namely R-134a, R-404A and to a lesser extent R-290. R-134a is used in the servicing of most small to medium sized commercial refrigeration appliances.

R-404A is the predominant ODS Alternative refrigerant in commercial refrigeration particularly in medium to large size appliances. R-404A is widely used as a replacement for R-22 in mid and low temperature applications. It is used in small, medium, and large commercial freezers, cold rooms, bottle coolers and chillers. The challenges associated with the use of R-404A are that most technicians lack the skills and knowledge on the correct use of HFC blends (Liquid Blend Charging), there is general resistance to adopt new refrigerants and in addition it is expensive for companies to decommission R-22 based equipment in plants and replace with R-404A.

- <u>Air-conditioning:</u> The air conditioning sector in Mali covers the installation, servicing, and repairs as well as decommissioning. There is no manufacturing of air conditioning appliances in the country though some companies are designated agents for SAMSUNG, SUNNY, HITACH, DAIKIN, SUMSUNG, MIDEA, LG, DANHAMBUSCHE, among others.
- <u>Industrial refrigeration</u>: R-407C is the predominant refrigerant used in industrial refrigeration. R-407C is used as a refrigerant in industrial processing plants to replace R-22 particularly in high ambient areas. R-407C is used mainly in air driers to cool the air before the production process as the air must be free of moisture to avoid corroding the production piping. R-717 is used in dairy and fish processing industries for cooling the production processes and for preserving the processed products in the blast freezer rooms. R-717 is also used for servicing industrial refrigeration appliances in the food processing and storage industries such as the dairy companies, fish, and meat processing companies.
- <u>*Transport refrigeration*</u>: R-134a and R-404A are the only refrigerants used in transport refrigeration in the country with R-404A being used in newer refrigerated trucks and marine transport sector.
- <u>Mobile Air-conditioning (MAC)</u>: In MAC units, the major refrigerant that is in use for servicing is R-134a in smaller to medium sized vehicles. R-134a is widely used in servicing Mobile Air Conditioning

units. Nearly all used motor vehicles imported into the country are fitted with AC units that come along charged with R-134a.

<u>Stationary air conditioning</u>: R-410A AC appliances have significantly penetrated the market as R-22 is being phased out. No new installations of R-22 are allowed. The use of R-410A in domestic, commercial, and industrial AC is expected to increase sharply until suitable alternatives are introduced. R-407C is used in air conditioning as a replacement for R-22. It is used mostly in split units. The refrigerant is not readily available on the local market, and this has limited its widespread use.

R-410A is being widely used as a replacement for R-22 in domestic and commercial air conditioning. Due to its zero ODP, most companies opted for R-410A to comply with ISO140001 environmental management systems certification requirements hence this refrigerant is now widely used in most new air conditioning appliances. Most air conditioners being imported into the country ranging from 9000 to 72000 BTUs come pre-charged with R-410A.

5. Description of information that needs to be gathered during project preparation. Explain how this data will be gathered.

7. How will activities related to preparing the KIP be linked to the current stages of the HPMP being implemented in the country? (OPTIONAL)

Lessons learned from the HPMP will be considered in the preparation of the Kigali HFC Implementation Plan. Development of strategies and action plans for the Kigali HFC Implementation Plan will take into account infrastructures established during the HPMP implementation, in particular, the existing institutional framework, institutional arrangement and capacity building under RAC servicing sector activities such as good servicing practice and certification etc. to ensure smooth and cost-effective implementation of the Kigali HFC Implementation Plan while sustaining HCFC phase-out.

8. How will the Multilateral Fund gender policy be considered during project preparation?

The Government of Mali is well aware of the Multilateral Fund Gender Policy and the relevant Executive Committee decisions 84/92 and 90/48. During the project preparation all relevant stakeholders will be sensitized on the gender policy. Efforts will be made to ensure that female stakeholders have equal opportunity to participate in the project preparation. When developing individual components of the plan, it will be ensured that gender-disaggregated data will be collected.

1. Montreal Protocol compliance target to be met in stage I of the KIP							
Phase-out commitmentFreezeYear of commitment2024							
(%)	10% reduction		2029				
⊠ Servicing only		□ Manufacturing only	\Box Servicing and manufacturing				

2. Brief background/description/information on approved relevant projects and multi-year agreements as follows:

- The current progress in implementation of any funded HFC-related project (enabling activities or stand-alone HFC investment projects)
- The current progress in ongoing HCFC phase-out management plan (HPMPs)
- Consideration of integrating HFC phase-down activities with HPMP activities taking into account previously approved HFC-related projects, if this information is available.

The 85th Meeting of the Executive Committee approved Republic of Moldova enabling activities project of USD 50,000. Project aimed to assist the Republic of Moldova to undertake the steps needed for the early ratification and implementation of the Kigali Amendment to the Montreal Protocol projects.

During the project it was undertaken a preliminary research study on mapping the HFCs alternatives in terms of availability on the markets and identifying potential priority areas for HFCs phase-out activities.

The project was completed in December 2022 and the final report is being prepared.

On the 3rd of March 2023 the Law on fluorinated greenhouse gases was adopted by the Parliament. The law transposes the Regulation (EU) no. 517/2014 of the European Parliament and of the Council of 16 April 2014 on fluorinated greenhouse gases, which repeals the Regulation (EC) no. 842/2006.

The provisions of the law regulate measures at national level regarding:

- a) isolation, use, recovery, and destruction of F-gases and related auxiliary measures;
- b) placing on the market of specific products and equipment, containing, or operating on F-gases;
- c) specific use of F-gases;
- d) application of quantitative limits for placing of HFCs on the market.

Also, the law establishes standards, conditions, and limits applicable to the following F-gases:

- a) hydrofluorocarbons (hereinafter-HFCs) used as refrigerants, cleaning solvents and foaming agents (such as those used in fire extinguishers);
- b) perfluorocarbons (hereinafter PFCs) used in the manufacture of semiconductors, as cleaning solvents and as foaming agents;
- c) sulphur hexafluorides (hereinafter SF₆) used in high voltage circuit breakers and magnesium production.

According to law the level of HFC consumption will be frozen starting with 2024. Restriction of the quantity of hydrofluorocarbons placed on the market and quota system will be put in place, since January 2024.

The Parliament of the Republic of Moldova adopted the Law of the Ratification of the Kigali Amendment on 30 July 2023. Official ratification of the Kigali Amendment took place on 22 September 2022.

The Republic of Moldova is categorized as a Low Volume Country (LVC). Historically, ODS and, more specifically, HCFCs consumption has occurred solely through their import and use in the refrigeration servicing sector. No HCFCs production capacity is established in the country. HCFC-22 is the only substance being in demand and imported into the country, and its use was recorded solely in the refrigeration and air conditioning (RAC) service sectors. No other HCFCs consumption was found in the manufacturing (foam), aerosol, fire-fighting, and solvent sectors.

The Stage I of the HCFCs Phase-Out Management Plan (HPMP-I) for the Republic of Moldova for the period 2011 to 2015, was approved at the 63rd ExCom meeting in December 2010. The baseline levels were established as 1.0 ODP tonne, being calculated using actual consumption of 1.16 ODP tonnes in 2009 and 0.71 ODP tonnes in 2010. The first control step was the freeze on production and consumption of HCFCs at the baseline levels by 1st January 2013, and the second control step was the reduction by 10% from the baseline level in 2015.

The Executive Committee (ExCom) of the Multilateral Fund (MLF) approved at its 72nd meeting in May 2014 the project supporting the Republic of Moldova to develop the HCFCs Phase-Out Management Plan Stage II (HPMP-II) proposal, focusing on compliance with the Montreal Protocol targets. The project was designed to be implemented jointly by United Nations Development Programme (UNDP), as Lead Implementing Agency and United Nations Environment Programme (UNEP), as Co-operating Implementing Agency. The HPMP-II programme was focused on collection of information inputs in consultation with the industry/commercial/private/public sectors and design the national interventions for the Republic of Moldova to meet 2020/35% HCFCs phase-out obligations. HPMP-II programme was designed to address phase-out of HCFCs consumption mainly in the Refrigeration and Air-Conditioning (RAC) servicing sector, with focuses on commercial refrigeration.

On December 2022, HPMP Stage III project was approved by the Executive Committee of the Multilateral Fund on its 88th meeting. The present HCFCs Phase-Out Management Plan – Stage III (HPMP-III) encompasses the current HCFCs consumption situation in the Republic of Moldova and the strategy, actions and support needed to compliance with the complete phase-out target by 2030, allowing for the 2.5% servicing tail during the period 2030-2040.

4. Based on the consumption data given above, please provide a description of the sector/sub-sector that use HFCs in the country, including a short analysis and explanation of the consumption trends (i.e., increasing or decreasing)

Preliminary information on the consumption of HFCs was obtained under the activities of the "Enabling Activities for the Kigali Amendment" project, which is detailed in the following table. It specifies each type of HFC used as a refrigerant in different sectors/subsectors.

Based on preliminary study, in the Republic of Moldova the HFCs are commonly used an in the following key sectors/subsectors, i.e.:

- stationary air-conditioning (servicing);
- mobile air-conditioning (servicing);
- industrial refrigeration (servicing);
- commercial refrigeration (servicing);
- aerosol (technical products and/or metered dose inhalers);
- foam;
- solvents;
- fire extinguishers.

7. How will activities related to preparing the KIP be linked to the current stages of the HPMP being implemented in the country? (OPTIONAL)

Synergies from ongoing and future HPMP activities will be assessed and integrated into the KIP development without additional costs. Lessons learned from HPMP implementation will be considered to the extent possible.

8. How will the Multilateral Fund gender policy be considered during project preparation?

The Government of Moldova (Republic of) is aware of the Multilateral Fund gender policy contained in ExCom document 84/73, and the related Executive Committee decision 84/92. During project preparation, relevant stakeholders will be sensitized on the gender policy. Efforts will be made to allow female stakeholders to contribute to the project preparation. To the extent possible, gender-disaggregated data will be collected.

2. Brief background/description/information on approved relevant projects and multi-year agreements as follows:

• The current progress in implementation of any funded HFC-related project (enabling activities or stand-alone HFC investment projects)

St. Vincent and the Grenadines Kigali Amendment Enabling Activities Project was approved at the 80th Meeting of the Executive Committee of the Multilateral Fund (MLF) for the Implementation of the Montreal Protocol. The project was completed on 31st June 2022.

The Revised Montreal Protocol Regulations stipulated that the new Annex of HFCs (Annex F) of the Kigali Amendment should be included in the list of Controlled substances under the Licensing and Quota System. A complete list of all HFCs and permitted HCFCs was submitted to the Comptroller of the Customs and Excise Department for their consideration. This is also in keeping with the continued work with the Department to establish and implement national break-out codes and the 2022 WCO HS Codes.

This and the other provision of the revised regulations were approved by Cabinet for revision by the Attorney General's office as a requirement before it is presented to the Parliament for final approval. Following its approval, it will be enforced and monitored by the NOU proceeded by the planned commence an HFC quota system in 2024. In addition to the Regulations, Saint Vincent and the Grenadines has also developed and

declared National Standards in the Refrigeration and Air Conditioning Industry namely, Labelling of refrigerant Containers and Handling, Storage and Safe Use of Refrigerant Containers.

The *Kigali Amendment* was ratified by Saint Vincent and the Grenadines on the 11th of November 2022. Prior to this, the Enabling Activities Project for HFCs phase-down was approved by 80th Meeting of the Executive Committee (ExCom 80) of the Multilateral Fund in November 2017. The following are key achievements:

- a. Ratification of the Kigali Amendment
- b. Finalization of Saint Vincent and the Grenadines' policy analysis report, that examined the country's readiness to implement the Kigali Amendment to the Montreal Protocol and phase down HFCs.
- c. A greater understanding of HFC refrigerants and alternatives available in Saint Vincent and the Grenadines, their uptake, and growth projections.
- d. Developed factsheet to support Saint Vincent and the Grenadines accession to the Kigali Amendment.
- e. Enhanced understanding of the NOU of the requirements of the Kigali and national actions needed to meet country obligations under the Amendment.
- f. Raised awareness of stakeholders and the general public regarding the importance and benefits of the Kigali Amendment.

• The current progress in ongoing HCFC phase-out management plan (HPMPs)

Saint Vincent and the Grenadines has only one Stage for its *HCFC Phase out Management Plan (HPMP)*. The *HPMP Stage I (HPMP I)* was approved by the ExCom-64 in July 2011 with a starting point for aggregate reduction in HCFC consumption of 0.28 ODPt. The overall objective of Stage I is to phase out 100% of HCFCs by 2025. This was planned to be achieved through the following activities: technical support to the RSS, implementation of the license and quota system, expansion of policy, education and awareness, monitoring, evaluation, and reporting. The funding was approved in four tranches.

The *HPMP I First Tranche*, was also approved at the ExCom64. The HPMP I first trache activities included: (i) Training; (ii) Awareness Campaign; (iii) Policy; (iv) Pilot Retrofit Project; and (v) Project Coordination and Management. The following has been completed under Tranche 1:

- a. Training of Technicians, custom officers, custom brokers, and importers
- b. Establishment of the Recovery Centres
- c. Public Awareness, outreach, and information dissemination for general and technical audiences
- d. Amendment to the St. Vincent and the Grenadines Montreal Protocol, Control Regulations, 2005
- e. Drafting Refrigerant Standards for the Refrigeration and Air-Conditioning Sector.
- f. Preliminary review of enabling policies including consultations with relevant government ministries on introduction of tax Incentives
- g. Pilot demonstration programmes utilizing alternative refrigerants for training and data collection.
- h. Implementation of Licensing and Quota System (LQS) to effectively monitor imports

The *HPMP I Second Tranche*, was approved at the ExCom75. The HPMP I second tranche activities included: (i) Training of Technicians; (ii) Law Enforcement Training; (iii) Customs Brokers and Importers Training; (iv) Public Awareness; (v) E-licensing system development and data monitoring; and (vi) Monitoring, Evaluation, and Reporting. The following has been completed under Tranche 2:

- a. Amended ODS legislation pending terminal review and approval by Country's Attorney General
- b. Development of standards in Refrigerant Cylinder labelling and Handling storage and transportation of Refrigerants in support of good practices and safety in the use of Hydrocarbon and other alternatives to HFCs declared.
- c. Continued enforcement of the LQS with the successful registration and distribution of HCFC quotas and licences.
- d. Continued discussions with Director General of Ministry of Finance for appropriate incentive programmes for refrigerant alternatives.
- e. TOR developed for public awareness consultant for the development of targeted education and outreach materials
- f. Development of an E-licensing system

The *HPMP I Third Tranche*, was approved at the ExCom86. The HPMP I third tranche activities include: (i) RAC Technicians Training; (ii) Law Enforcement Training; (iii) Public Awareness Campaign; (iv) Finalization

of ODS regulations amendment; (v) Development of additional Standards; (vi) Stakeholder consultations; and (vii) Project Coordination and Management.

Tranche 3 activities are planned for completion by December 2024.

• Consideration of integrating HFC phase-down activities with HPMP activities taking into account previously approved HFC-related projects, if this information is available.

Since the country is implementing a one stage of HPMP to achieve full phase-out of HCFCs by 2025, there is no plan to integrate KIP activities with the ongoing HPMP activities. But the lessons learnt from HPMP as well as the existing institutional framework will be used for the KIP strategy development and its implementation to maximize the results.

Click or tap here to enter	text.				
3. Overview of current HFC consumption in metric tonnes by substance (last three years)					
Substance/blend	Sector	2020	2021	2022	
HFC-134a	RAC servicing	2.88	2.00	8.90	
HFC-410a	RAC servicing	2.76	8.19	8.61	
HFC-404a	RAC servicing	1.07	1.42	5.09

TOTAL	RAC servicing	8.10	11.75	22.72	
4 10 1 11					

4. Based on the consumption data given above, please provide a description of the sector/sub-sector that use HFCs in the country, including a short analysis and explanation of the consumption trends (i.e., increasing or decreasing)

Based on the consumption data in no. 3 above, the sub-sectors that use HFCs in Saint Vincent and the Grenadines are the refrigeration and air conditioning servicing sectors, particularly the domestic refrigeration and domestic/commercial air conditioning sub-sectors. HFC consumption has significantly increased from 2020 to 2022 with an average year-on-year average increase of 69%, with the greatest increase between the years 2020 and 2022 (280% increase) and 2021 to 2022 (93%). This could be due to any of the following reasons, rebounding the of economic and tourism activities from the 2020 COVID-19 Pandemic; increase global temperatures and a rise in the use of mobile and stationary air-conditioning systems, and an increase in the use of DIY AC servicing kits. However, this 3-year sample size data set may be too limited a reference to make any concrete conclusions on whether this is truly trending upwards. To better understand the market situation of the RAC servicing sector and identify sectors to prioritize under KIP stage I, comprehensive data collection and analysis needs to be conducted under KIP PRP.

5. Description of information that needs to be gathered during project preparation. Explain how this data will be gathered

uata will be gathered	uata will be gathered

6. Activities to be undertaken for project preparation ar		
Activity	Indicative funding (US \$)	Agency
Update sectoral consumption analysis focused on end user consumption, including a wider survey amongst sectors and subsectors - Collection of information on consumption of HFCs per sector and its substitutes, pending analysis such as HFC uses in solvents, fire-fighting and other sectors that are identified, which is through the execution of interviews and surveys that they make it possible to determine the sectoral distribution and consumption projections of HFCs in their	\$15,000	UNIDO
pure state and in mixtures; specifically, the development of an economic evaluation of the replacement of HFCs to environmentally friendly substitutes in the controlled sectors Promotion of low-GWP alternatives, including analysis of	\$10,000	UNEP
incentives and disincentives		
Conduct desk study, gap assessment and prepare the national strategy for the gradual reduction of HFCs, which includes the evaluation and identification of sectors to prioritize taking into account of GWP of each substance, the uses and the availability of alternatives in each sector, development of a gender engagement strategy/plan for the RAC Sector in line with the MLFS' Gender Policy	\$45,000	UNEP
Assessment of training and certification needs at the country level in the use of flammable refrigerants, development of a training plan and organization of workshops with the main stakeholders and training institutions.	\$15,000	UNIDO
Stakeholders' consultation meetings to introduce prepared draft KIP overarching strategy and implementation plan and data validation meeting with the relevant stakeholders.	\$15,000	UNEP
TOTAL 7. How will activities related to preparing the KIP be lin	\$100,000	

implemented in the country? (OPTIONAL)KIP activities are expected to have potential overlaps in the areas of training and certification of technicians,
training of customs and enforcement officers and policy measures. These will be examined with a view of
maximizing the best mode of implementation. Other synergies from ongoing and future HPMP activities will be
assessed and integrated into the KIP development where applicable without additional costs. Lessons learnt from

HPMP implementation will also be considered to the extent possible8. How will the Multilateral Fund gender policy be considered during project preparation?

Saint Vincent and the Grenadines' RSS has traditionally been male dominated with little involvement of females in installation and servicing activities. However, the Government has been taking decisive action to encourage women to be more active in the RSS and HPMP implementation. Saint Vincent is a State Party to the Convention on the Elimination of all Forms of Discrimination Against Women (CEDAW) and has ratified the International Labour Organization Discrimination (Employment and Occupation) Convention 1958 (No. 111), ILO Equal Remuneration Convention, 1951 (No. 100) the ILO Employment Policy Convention (1964) No. 122. Gender mainstreaming and the implementation of the MLFS' Gender Policy will continue throughout the development (and implementation) of the KIP. Female participants and RAC Technicians will be encouraged to participate at all consultations during the preparation as their input into the development of the KIP will be crucial to the expected impact of the KIP on the sector and the implementation of the policy. In addition, the development of a RAC Gender engagement Strategy /Plan will focus on the increase enrolment of females in RAC programmes offered at Tertiary institutions. Recruitment of consultants under the preparation will be open to women who will be encouraged to apply. Additionally, the NOU will track the attendance of participants at all sessions based on gender and will ensure that any circulation of results will carry images that portray women.

MULTILATERAL FUND FOR THE IMPLEMENTATION OF THE MONTREAL PROTOCOL

Part I: Project information

Project title:	Preparation of national inventory of banks of used or unwanted controlled substances		
Country:	Albania		
Implementing agency:	UNEP		
Meeting where request is being	ExCom 93		
submitted			
Implementation period	24 months		
Duration of implementation (i.e., time (i	in months)) from the approval of PRP to submission of the		
national inventory and action plan (plea	national inventory and action plan (please specify): January 2024 – December 2025		
Funding requested:			
Agency	Funding requested (US \$)*		
UNEP	80,000 plus PSC		

*Details should be consistent with information provided in the relevant sections below.

Part II: Prerequisites for submission

Item	Yes	No
Official endorsement letter from Government, indicating roles of respective agencies (where more than one IA is involved), and that the	\boxtimes	
national inventory/action plan will be completed within 24 months from the date of project approval		
Project included in the bilateral/IA business plan?		\boxtimes
If NO , please provide explanation: Decision 91/66 was taken in December 2022 and thus requests for preparatory funding submitted to ExCom 93 are not reflected in the business plan 2023.		

- A. Information required for the funding request to prepare a national inventory of banks of used or unwanted controlled substances, and a plan for the collection, transport and disposal of such substances, including consideration of recycling, reclamation and cost-effective destruction
- 1. Brief overview of the the concept, methodology and approach to be taken for the preparation of the national inventory and / or action plan and how it is linked to other activities in the country (i.e., national plans like the KIP), in particular those activities in the refrigeration servicing sector such as recovery, recycling, and reclamation programmes

The Montreal Protocol has been effectively regulating the production and consumption of ozonedepleting substances (ODS) since 1989. The Kigali Amendment added the global warming hydrofluorocarbons (HFCs) to the list of controlled substances. Large banks of used and unwanted controlled substances have accumulated globally, which are continuously being released to the atmosphere from these banks. These emissions are damaging the ozone layer and contributing to global warming. Banks of controlled substances are not regulated under the Montreal Protocol. Collection, recovery and disposal (recycling, reclaim, destruction) of used or unwanted controlled substances represent a challenge for developing countries.

The project aims to establish an inventory of banks of used or unwanted controlled substances in Albania, and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective destruction. It will quantify the mitigation potential in line with ExCom Decision 91/66, include the analysis of existing legislation and policies, and stakeholder consultations. The final report and action plan will proposed actions, new legislation and policies to enhance the collection and disposal of used or unwanted ODS / HFCs.

The methodology / approach might be inspired by that recommended by the Climate and Ozone Protection Alliance (COPA).

The inventory of banks of used and unwanted controlled substances and action plan will cover ozonedepleting substances like HCFCs and global warming HFCs and thus contribute to the objectives of the HPMP and the future KIP to reduce emissions though good practices / containment, recovery, recycling and reclaim (RRR) and environmentally sound disposal. This includes seized chemicals stored at customs warehouses, waste and contaminated chemicals / blends, and residues from recycling and reclaim processes.

Official endorsement letter from Government, indicating roles of respective agencies (where more than one IA is involved), and that the national inventory/action plan will be completed within 24 months from the date of project approval		
Project included in the bilateral/IA business plan?		\boxtimes
If NO, please provide explanation: Decision 91/66 was taken in December 2022 and thus requests for preparatory funding submitted to ExCom 93 are not reflected in the business plan 2023.		

Information required for PRP funding request for the national inventories of banks of used or unwanted controlled substances and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective destruction.

1. Brief overview of the concept, methodology and approach to be taken for the preparation of the national inventory and / or action plan and how it is linked to other activities in the country (i.e., national plans like the KIP), in particular those activities in the refrigeration servicing sector such as recovery, recycling, and reclamation programs.

The Montreal Protocol has been effectively regulating the production and consumption of ozone-depleting substances (ODS) since 1989. The Kigali Amendment added hydrofluorocarbons (HFCs) to the list of controlled substances. Large banks of used and unwanted controlled substances have been accumulated globally, which are continuously being released to the atmosphere from these banks. These emissions are damaging the ozone layer and contributing to global warming. Banks of controlled substances are not regulated under the Montreal Protocol. Collection, recovery and cost-effective disposal (recycling, reclaiming, destruction) of used or unwanted controlled substances represent a challenge for developing countries.

Costa Rica has made great advances to define appropriate solutions for the disposal of obsolete refrigerant gases through the incineration of those substances in cement kilns whose thermal processes offer favorable conditions for its thermal destruction. During the year 2014 and followed by a request of the Ministry of Health, the preparation of a test protocol started to evaluate the technical and environmental feasibility for the destruction of refrigerant gases in cement kilns. In 2015, a test protocol was applied to evaluate flue gas emissions during the destruction of CFC-12, HCFC-22 and HFC -134a, which had to comply with the "Regulation for the coprocessing and management of waste in cement kilns No. 40557-S". Starting in 2017 and to comply with requirements under a public-private agreement between MINAE and the cement company Holcim, the destruction of authorized refrigerants formally started. To date, about 13.6 tons of refrigerants were co-processed which has prevented emissions of about 28 thousand metric tons of CO2 equivalent. With the Kigali amendment entering into force and the increasing demand for the final disposal of HFC blends, it is necessary to expand the variety of substances authorized for destruction, among them R-410A, R-404A, R-507 and 407C.

The project aims to establish an inventory of banks of used or unwanted controlled substances in Costa Rica, and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective destruction. It will quantify the mitigation potential in line with ExCom Decision 91/66, include the analysis of existing legislation and policies, and stakeholder consultations. The final report and action plan will propose actions, new legislation and policies to enhance the collection and disposal of used or unwanted ODS and HFCs.

The inventory of banks of used and unwanted controlled substances and action plan will cover ozone-depleting substances like HCFCs and global warming HFCs and thus contribute to the objectives of the HPMP and the future KIP to reduce emissions through good practices / containment, recovery, recycling and reclaim (RRR) and environmentally sound disposal. This includes seized chemicals stored at customs warehouses, waste and contaminated chemicals / blends, and residues from recycling and reclaiming processes.

Item	Yes	No
Official endorsement letter from Government, indicating roles of respective agencies (where more than one IA is involved), and that the national inventory/action plan will be completed within 24 months from the date of project approval		
Project included in the bilateral/IA business plan?		\boxtimes
If NO, please provide explanation: Decision 91/66 was taken in December 2022 and thus requests for preparatory funding submitted to ExCom 93 are not reflected in the business plan 2023.		

Information required for PRP funding request for the national inventories of banks of used or unwanted controlled substances and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective destruction.

1. Brief overview of the concept, methodology and approach to be taken for the preparation of the national inventory and / or action plan and how it is linked to other activities in the country (i.e., national plans like the KIP), in particular those activities in the refrigeration servicing sector such as recovery, recycling, and reclamation programs.

The Montreal Protocol has been effectively regulating the production and consumption of ozone-depleting substances (ODS) since 1989. The Kigali Amendment added the global warming hydrofluorocarbons (HFCs) to the list of controlled substances. Large banks of used and unwanted controlled substances have been accumulated globally, which are continuously being released to the atmosphere from these banks. These emissions are damaging the ozone layer and contributing to global warming. Banks of controlled substances are not regulated under the Montreal Protocol. Collection, recovery and cost-effective disposal (recycling, reclaiming, destruction) of used or unwanted controlled substances represent a challenge for developing countries.

The project aims to establish an inventory of banks of used or unwanted controlled substances in the Dominican Republic, and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective destruction. It will quantify the mitigation potential in line with ExCom Decision 91/66, include the analysis of existing legislation and policies, and stakeholder consultations. The final report and action plan will proposed actions, new legislation and policies to enhance the collection and disposal of used or unwanted ODS and HFCs.

The inventory of banks of used and unwanted controlled substances and action plan will cover ozone-depleting substances like HCFCs and global warming HFCs and thus contribute to the objectives of the HPMP and the future KIP to reduce emissions through good practices / containment, recovery, recycling and reclaim (RRR) and environmentally sound disposal. This includes seized chemicals stored at customs warehouses, waste and contaminated chemicals / blends, and residues from recycling and reclaiming processes.

It is estimated that in the Dominican Republic a substantial number of banks of used and unwanted controlled substances are generated by the import of used equipment through the informal sector (e.g. personal shipments etc.) and therefore, this preparatory funds will be also partially used to conduct a first inventory/estimation of those substances.

Part I: Project information

*Details should be consistent with information provided in the relevant sections below.

Part II: Prerequisites for submission

Item	Yes	No
Official endorsement letter from Government, indicating roles of respective agencies (where more than one IA is involved), and that the national inventory/action plan will be completed within 24 months from the date of project approval		
Project included in the bilateral/IA business plan?		\boxtimes
If NO, please provide explanation: Decision 91/66 was taken in December 2022 and thus requests for preparatory funding submitted to ExCom 93 are not reflected in the business plan 2023.		

Information required for PRP funding request for the national inventories of banks of used or unwanted controlled substances and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective disposal.

1. Brief overview of the concept, methodology and approach to be taken for the preparation of the national inventory and / or action plan and how it is linked to other activities in the country (i.e., national plans like the KIP), in particular those activities in the refrigeration servicing sector such as recovery, recycling, and reclamation programs.

The Montreal Protocol has been effectively regulating the production and consumption of ozone-depleting substances (ODS) since 1989. The Kigali Amendment added hydrofluorocarbons (HFCs) to the list of controlled substances. Large banks of used and unwanted controlled substances have been accumulated globally, which are continuously being released to the atmosphere from these banks. These emissions are damaging the ozone layer and contributing to global warming. Banks of controlled substances are not regulated under the Montreal Protocol. Collection, recovery and cost-effective disposal (recycling, reclaiming, destruction) of used or unwanted controlled substances represent a challenge for developing countries.

The project aims to establish an inventory of banks of used or unwanted controlled substances in El Salvador, and a plan for the collection, transport, and disposal of such substances, including consideration of recycling, reclamation, and cost-effective disposal. It will quantify the mitigation potential in line with ExCom Decision 91/66, include the analysis of existing legislation and policies, and stakeholder consultations. The final report and action plan will proposed actions, new legislation and policies to enhance the collection and disposal of used or unwanted ODS and HFCs.

The inventory of banks of used and unwanted controlled substances and action plan will cover ozone-depleting substances like HCFCs and global warming HFCs and thus contribute to the objectives of the HPMP and the future KIP to reduce emissions through good practices / containment, recovery, recycling and reclaim (RRR) and environmentally sound disposal. This includes seized chemicals stored at customs warehouses, waste and contaminated chemicals / blends, and residues from recycling and reclaiming processes.

2. Description of activities that will be implemented during the preparation of the national			
inventories/action plans of banks for used and/or unwanted controlled substances and an			
indication of the estimated costs for the activities described broken down per agency
