EXECUTIVE COMMITTEE
OF THE MULTILATERAL FUND FOR THE
IMPLEMENTATION OF THE MONTREAL PROTOCOL
Twenty-seventh Meeting
Montreal, 24-26 March 1999

Addendum

PROJECT PROPOSAL: IRAN

This information should be added to the Secretariat's Comments and Recommendations (page 4 of UNEP/OzL.Pro/ExCom/27/27) on the project "Replacement of CFC-12 as refrigerant by HFC-134a at Iran Compressor Manufacturing Company (ICMC)".

COMMENTS

5. The Secretariat has indicated in its comments (UNEP/OzL.Pro/ExCom/27/27, Page 4, Paragraph 3) that more data were expected from UNIDO regarding the number of units produced by downstream manufacturers in Iran using hermetic compressors.
6. UNIDO provided to the Secretariat additional data in respect of production level and use of hermetic compressors in 150 downstream manufacturers. These data, however, need further verification to ensure the accurate calculation of the level of the eligible grant.
7. UNIDO was requested to verify the data on the basis of information on
 - number of units produced by downstream manufacturers for the past three years;
 - ODS consumption by the same enterprises for the last three years;
 - number of hermetic compressors of 250 rated watts used by these enterprises.
8. UNIDO informed the Secretariat that it will undertake this task immediately.

RECOMMENDATION

1. The Secretariat recommends:
 - (i) to defer the project pending the provision of verified data by UNIDO;
 - (ii) to request the implementing agencies planning to submit projects, based on Decision 26/36 to ensure the verification of data and to include in their project proposals information on:
 - number of units produced by downstream manufacturers for the past three years;
 - ODS consumption by the same enterprises for the last three years;
 - number of hermetic compressors of 250 rated watts used by these enterprises.
