Phase-out of the production and consumption of CTC for process agent and other non-identified uses (phase I): 2009 annual programme  <i>The World Bank was requested to provide, as part of their verification of the 2009 CTC production, for each enterprise data on the amount of residue from production, as well as the CTC content of the residue. It should be ensured that the measurements and data reported are sufficiently accurate and reliable to support the verification. The next verification report should contain a section describing how this requirement was enacted, and the results. It should also contain, on a plant-by-plant basis, data about quantity of residue, CTC content, and subsequent treatment or use of the residue. The information needs to be sufficiently detailed to allow calculation of probable CTC emissions.</i>	IBRD		1,000,000	75,000	1,075,000
