Executive Committee of
the Multilateral Fund for the
Implementation of the Montreal Protocol

Twenty-second Meeting
Nairobi, 28-30 May 1997

**SUMMARY STATUS REPORT ON ODS PHASE-OUT
FOR ARTICLE 5 COUNTRIES**

Introduction

1. The mandate of this report is contained in Decision 21/5 under which the Executive Committee decided:

“To request the Secretariat to work with the implementing agencies to produce a summary status report for each Article 5 country that would, using the latest available data, include information on the consumption of each country, the number of tonnes to be reduced through implementation of projects already approved by the Fund, the status of implementation of such projects, the amount of ODS that was expected to be reduced through planned approvals in 1997, and an indication of the relative difficulty that each country might face in meeting the 1999 freeze and, as far as practicable, subsequent control measures;” (UNEP/OzL.Pro/ExCom/21/36, para. 12(e))

2. Preparation of the report is a joint undertaking of the Fund Secretariat and the implementing agencies.

Input

3. A division of labour was agreed by the Secretariat and implementing agencies as follows:

Secretariat:

- (a) Design and distribute to the implementing agencies the format for summary status report,
- (b) Provide the data available from the data base,
- (c) Design format for the consolidated report and undertake the data consolidation.

Implementing agencies:

- (a) Provide data on project implementation,
- (b) Make assessment on the country's ability to meet the freeze in 1999 and subsequent control targets.

The Process

4. The format for the summary status report on implementation of phase-out of CFCs by country was dispatched by the Secretariat to the implementing agencies, with the request to provide current and projected implementation data. The Secretariat also proposed that the implementing agencies divide up the countries among themselves and designate a lead agency for each country for better coordination, however, the agencies elected to provide their data separately. Subsequently the Secretariat aggregated the data provided by the implementing agencies for each country.

5. Finally, the Secretariat extracted the most relevant data from each country status report and consolidated them into a global summary status report on implementation of phase-out of CFCs.

Summary Status Report on Implementation of Phase-out of CFCs by country

6. This report consists of 111 sheets representing 111 countries, attached as Annex I. Each country sheet presents in a matrix form data on the dates of approval of the country programme and institutional strengthening project, status of ratification of the Vienna Convention and the Montreal Protocol and its amendments, CFC consumption, phase-out approvals and funding and status of implementation, and an assessment of the country's ability to comply with the 1999 freeze and subsequent control obligations.

7. The matrix is formatted as follows:

- Items 1-2: contains dates of approval of the country programme and institutional strengthening and data on the status of ratification of the Vienna Convention and the Montreal Protocol and its amendments.
- Item 3: assembles all the data on the CFCs consumption, phase-out approvals, funding and implementation and includes columns on:

CFC consumption: contains annual CFC consumption data from either of the two sources, that reported to Ozone Secretariat or most recent data reported to the Fund Secretariat,

Approvals on CFC phase-out and funds: provides annual break-down on approvals on CFCs to be phased out and funds allocated by the Executive Committee,

Implementation as of Dec. 1996: contains status of implementation of all the approvals as of that date both for CFCs and funds disbursed to beneficiaries,

Implementation as of Dec. 1997: estimates provided by implementing agencies,

Implementation as of Dec. 1999: estimates provided by implementing agencies.

- Item 4: records those sectors and sub-sectors where the entire CFCs consumption has either been phased out or funded.
- Items 5 and 6: contains assessment provided by implementing agencies on the country's ability to comply with the 1999 freeze and subsequent control obligations.

Global summary status report on implementation of phase-out of CFCs

8. This is a consolidated version of the individual country sheets, attached as Annex II. The consolidation is done in accordance with the information requirement in Decision 21/5 (e). All the data for each country which is condensed into 8 columns across one line enables the reader to view at a glance the status of the CFC phase-out implementation as at 31 December 1996, and a projection into 1999. The last column for each country concludes with an estimate of the country's ability to meet the 1999 freeze and subsequent control measures. Thus,

- Item 2: contains the most recent CFC consumption data either from that reported to the Ozone Secretariat or to the Fund Secretariat.
- Item 3: contains the approvals of CFCs to be phased out as of December 1996.
- Item 4: shows the relationship between the approvals as of December 1996 to the total consumption, which is derived by dividing the value in 3 by the value in 2.
- Item 5: contains the estimated implementation of approved CFCs by December 1996.
- Item 6: shows the relationship between the estimated implementation as of December 1996 to the total approvals as of December 1996, which is derived by dividing the value in 5 by the value in 3.
- Item 7: is an estimate of the implementation to be realized by December 1999.
- Item 8: is a summary of the estimate made of the country's ability to meet the 1999 freeze and subsequent control targets.

ANNEX I

**SUMMARY STATUS REPORT ON IMPLEMENTATION
OF PHASE-OUT OF CFCS BY COUNTRY**
